English Parliament, Act of Supremacy, 1534

From the passage, one may infer that the English Parliament wished to argue that the Act of Supremacy would:

- (A) give the English king a new position of authority
- (B) give the position of head of the Church of England to Henry VIII alone and exclude his heirs
- (C) establish Calvinism as the one true theology in England
- (D) end various forms of corruption plaguing the Church in England

"Answer": "B"

"Reasoning": "The Act of Supremacy aimed to give the English king a new position of authority as the supreme head of the Church of England, in addition to his existing role as the monarch. This is evident from the language used in the passage, which emphasizes the king's authority and power over the Church of England."

Reading Comprehension and "best Practices" Dawn K. Webster, 2011 **Neural Reading Comprehension and Beyond** Danqi Chen, 2018. Teaching machines to understand human language documents is one of the most elusive and long standing challenges in Artificial Intelligence. This thesis tackles the problem of reading comprehension: how to build computer systems to read a passage of text and answer comprehension questions. On the one hand, we think that reading comprehension is an important task for evaluating how well computer systems understand human language. On the other hand, if we can build high performing reading comprehension systems, they would be a crucial technology for applications such as question answering and dialogue systems. In this thesis, we focus on neural reading comprehension, a class of reading comprehension models built on top of deep neural networks. Compared to traditional sparse hand designed feature based models, these end to end neural models have proven to be more effective in learning rich linguistic phenomena and improved performance on all the modern reading comprehension benchmarks by a large margin. This thesis consists of two parts. In the first part, we aim to cover the essence of neural reading comprehension and present our efforts at building effective neural reading comprehension models and more importantly, understanding what neural reading comprehension models have

actually learned and what depth of language understanding is needed to solve current tasks We also summarize recent advances and discuss future directions and open questions in this field In the second part of this thesis we investigate how we can build practical applications based on the recent success of neural reading comprehension In particular we pioneered two new research directions 1 how we can combine information retrieval techniques with neural reading comprehension to tackle large scale open domain question answering and 2 how we can build conversational question answering systems from current single turn span based reading comprehension models We implemented these ideas in the DrQA and CoQA projects and we demonstrate the effectiveness of these approaches We believe that they hold great promise for future language technologies *Reading Comprehension* Rebecca Mok,2005-01-01 **Improving Reading Comprehension Skills** John Langan,Harley F.
