**Generations Models with Productive Capital** Günther Lang, 1996-10-02 This book examines several unsolved problems in OLG models with productive capital. It extends the well known Diamond analysis to a model with variable population growth and characterizes dynamically efficient allocations. Then the design of pay as you go pension schemes and government debt to achieve a Pareto improvement of inefficient growth paths are investigated. Departing from pure efficiency aspects the book turns to questions of intergenerational fairness and optimal population growth. Finally introducing a polito economic model of transfers between generations conflicting preferences between an infinite sequence of governments are solved for a Markov perfect equilibrium providing some important insights into mechanisms of growth and the nature of capital income taxation.
