[Challenges and Current Research Status of Vertigo/Vestibular Diseases, volume III](#) Sulin Zhang, Andrea Castellucci, Hubertus Axer, Nicolas Perez-Fernandez, Jun Wang, 2025-11-05 This Research Topic is the third volume of the Research Topic Challenges and Current Research Status of Vertigo/Vestibular Diseases. Please see the first volume here and the second volume here. Vertigo and vestibular diseases represent a significant area of research within the field of otolaryngology and neurology given their complex nature and the profound impact they have on patients' quality of life. These disorders are characterized by symptoms such as dizziness, imbalance, and spatial disorientation, which can be debilitating and challenging to diagnose and treat. Current research has identified a range of underlying causes from peripheral vestibular dysfunctions to central nervous system anomalies. Despite advancements in diagnostic techniques and therapeutic interventions, there remain substantial gaps in understanding the pathophysiology of these conditions, particularly in differentiating between peripheral and central causes of vertigo. Recent studies have explored the role of genetic predispositions, the impact of comorbid conditions such as sleep disorders and mental health issues, and the effectiveness of various rehabilitation strategies. However, there is still a need for comprehensive research to address the multifaceted nature of these disorders and to develop more effective personalized treatment approaches. This research topic aims to advance the understanding of vertigo and vestibular diseases by exploring their underlying mechanisms, improving diagnostic accuracy, and enhancing therapeutic strategies. The objective is to address specific questions such as the differential diagnosis of

peripheral versus central vertigo the role of vestibular dysfunction in cognitive impairment and the effectiveness of multimodal therapy programs By testing hypotheses related to vestibular compensation and rehabilitation this research seeks to contribute to the development of innovative solutions for managing these complex disorders To gather further insights into the challenges and current research status of vertigo and vestibular diseases we welcome articles addressing but not limited to the following themes Differential diagnosis of peripheral and central positional vertigo Recurrence and residual symptoms of benign paroxysmal positional vertigo Inner ear malformation and vestibular dysfunction Sleep disorders and vestibular disease Vestibular testing and imaging in patients with vertigo or vestibular disorders Cognitive impairment and vestibular disorders Multisensory integration and vestibular disorders Mental diseases anxiety depression insomnia etc and vertigo disorders Research on vestibular compensation and rehabilitation training Multimodal therapy programs for dizziness and vertigo Therapy concepts for persistent postural perceptual dizziness PPPD Functional brain states in vertigo dizziness Age associated aspects of dizziness vertigo Epidemiological investigation of vertigo or vestibular disorders Molecular and genetic studies of vertigo or vestibular disorders Transcranial Magnetic and Electrical Brain Stimulation for Neurological Disorders Bahman Zohuri,Patrick J. the fear that opioid receptor agonists may decrease gastrointestinal motility and the conflicting data on the analgesic efficacy of full mu opioids in horses with naturally occurring diseases. Therefore this special issue will revolve around recent advancements in equine pain understanding, recognition and management. Authors are encouraged to submit papers in the areas of recognizing, preventing, modulating and managing acute and chronic pain in horses. We also encourage submissions focusing on pain mechanisms such as mechanistic studies ex vivo or preliminary work involving tissues or biological samples from well phenotyped horses. Finally we note significant advancements in the development of therapeutic platforms, viral transfection modalities or targeted neurotoxins that have been documented on other species and suggest relevance to the equine patient.
