**A Study of Memory for Connected Trains of Thought (Classic Reprint)** Ernest Norton Henderson,2015-07-12

Excerpt from A Study of Memory for Connected Trains of Thought Any one who working from the point of view of a student of education ventures upon the territory of the experimental psychologist is forced to come to some conclusion for better or for worse as to whether experimental psychology has anything to give to the intelligent appreciation of education A decision on this matter will rest largely upon point of view One s general philosophy will go far toward determining whether one says that the teacher has no real use for the experimentalist or that education must be revolutionized by this comparatively new science From the historical point of view it is interesting to note that consistency should keep experimental psychology the willing bond servant of the science of education For if we regard the attempt of Herbart to deal quantitatively with consciousness as furnishing the initial impulse toward the development of experimental study of mental phenomena then it is plain that in its beginnings this science was created to further an analysis the great aim of which was a theory of teaching Herbart was primarily interested in education and his psychological theories were probably influenced largely by the bias of his educational principles The experimental psychology that gives us what it declares to be a purely academic analysis of consciousness an analysis professedly useless to the teacher such a science is indeed an ungrateful child As a matter of fact is it not likely that a science of education if ever there is such a subject must be based on a psychology that does not fall short of a study of acts of will in such a way as to further practical efficiency in dealing with children and men May not our generation be justified in saying not only that knowledge is power but that all significant knowledge must be a source of practical strength About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

*Competition, Value and Distribution in Classical Economics* Heinz D. Kurz, Neri Salvadori, 2022-03-09 Drawing in particular on the work of Sraffa Smith Ricardo and Marx the essays in this volume explore the characteristic features of the Classical economists approach to economic problems and the renewal of interest in that approach in modern times In recent years new material has been made available on both Sraffa and Marx which have made new insights and interpretations possible The release of Sraffa's hitherto unpublished papers and correspondence has led to reconsideration of doctrinal questions such as to what extent Sraffa built upon or deviated from the analyses of Adam Smith David Ricardo and other representatives of the classical British school and Karl Marx A major theme is also to what extent we can today equipped with Sraffa's insights and analytical tools re interpret and develop ideas of classical authors which they could present only in primitive forms on technological progress exhaustible resources and other contemporary issues On Marx the publication of the MEGA2 edition of the works papers and correspondence of Marx and Engels also gives rise to a reconsideration of this relationship given Marx's disenchantment with some of his own work and return to ideas advocated by Ricardo especially as regards the long term tendency of the rate of profits Finally the classical notion of competition and monopoly deserve to be scrutinized carefully again and frequent misinterpretations in the literature refuted This volume is vital reading for scholars of classical economics Marx and Sraffa and the history of economic thought more broadly It also deals with issues in the areas of machinery and technical progress joint production and economic development and growth
