Memory and Emotion Daniel Reisberg, Paula Hertel, 2003-12-04 Understanding the interplay between memory and emotion is crucial for the work of researchers in many arenas clinicians psychologists interested in eyewitness testimony psychobiologists to name just a few *Memory and Emotion* spans all these areas and brings them together into one volume Daniel Reisberg and Paula Hertel have assembled contributions from the most visible and productive researchers working at the intersection of emotion and memory The result is a sophisticated profile of our current understanding of how memory is shaped both by emotion and emotional disorder The diverse list of topics includes the biology of traumatic memory the memory disorders produced by depression anxiety and schizophrenia the nature of emotional memory both in children and the elderly and the collective memory processes at work in remembering the Holocaust This unified collection of cutting edge research will be an invaluable guide to scholars and students in many different research areas

The Handbook of Emotion and Memory Sven-Åke Christianson, 1992 First Published in 1992 Routledge is an imprint of Taylor Francis an informa company

Emotion in Memory and Development Jodi Quas, Robyn Fivush, 2009-04-09 The question of how well children recall and can discuss emotional experiences is one with numerous theoretical and applied implications Theoretically the role of emotions generally and emotional distress specifically in children s emerging cognitive abilities has implications for understanding how children attend to and process information how children react to emotional information and how that information affects their development and functioning over time Practically speaking increasing numbers of children have been involved in legal settings as victims or witnesses to violence

highlighting the need to determine the extent to which children's eyewitness reports of traumatic experiences are accurate and complete. In clinical contexts the ability to narrate emotional events is emerging as a significant predictor of psychological outcomes. How children learn to describe emotional experiences and the extent to which they can do so coherently thus has important implications for clinical interventions.

Memory and Emotion James L. McGaugh, 2003

Memories come in many different forms and vary substantially in strength some such as where you put your car keys can be brief while others remain in the mind forever. James McGaugh a leading neurobiologist provides an accessible and thought provoking look at how we remember and why we forget. Beginning with the first scientific studies of learning and ending with the latest cutting edge research he explores how memories are made and preserved why some experiences fade and disappear with time how stress hormones effect the consolidation of memory whether drugs would improve our ability to learn and what studies of extraordinary memories and disorders tell us about the workings of the brain systems involved in memory formation.

Memory and Emotion Daniel Reisberg, Paula Hertel, 2004

And lastly why is remembering a creative act that can and often does produce faulty memories of our experiences.

BOOK JACKET

Memory and Emotion Pasquale Calabrese, Anna Neugebauer, 2002

This book deals primarily with the role of emotions in the mechanisms of memory. It is a compilation of the lectures given at a course conducted at the International School of Biocybernetics.

Cannabinoid Modulation of Emotion, Memory, and Motivation Patrizia Campolongo, Liana Fattore, 2015-05-18

The endocannabinoid system consists of cannabinoid receptors their endogenous lipid ligands endocannabinoids and the enzymatic machinery for their synthesis and degradation. In the brain endocannabinoids regulate ion channel activity and neurotransmitter release and thereby contribute to various aspects of brain function including memory reward and emotions. Their ability to modulate synaptic efficacy has a wide range of functional consequences and provides unique therapeutic possibilities. Unprecedented advances have been made in the understanding of the role of endocannabinoids in the regulation of the emotional brain over the past few years. However a comprehensive book encompassing all these aspects is still lacking. The book will provide an overview of the role played by the endocannabinoid system in the regulation of emotional processes with particular emphasis on the modulation of memory and reward for emotionally arousing events and for the regulation of motivational aspects in cannabis use.

How Does Emotion Affect Attention and Memory? Katherine Mickley Steinmetz, Elizabeth A. Kensinger, 2010

Out of all of the information that we experience only a subset will become part of our memories. Attentional processes engaged during an event's unfolding are essential for allowing us to transform an experience into a memory and emotion can critically modulate those attentional processes increasing the likelihood that an emotional experience becomes part of our memory stores. This book reviews behavioural and neuroimaging evidence that has revealed effects of emotion on memory and attention in individuals with and without posttraumatic stress disorder PTSD.

Remembered Self Jefferson A. Singer, Peter Salovey, 2010-06-15

A theory for psychologists on the role of memory in personality psychology. In The

Remembered Self Jefferson A Singer and Peter Salovey persuasively argue that memories are an important window into one's life story revealing characteristic moods motives and thinking patterns Through experimental evidence clinical case material and examples from literature the authors offer a fresh perspective on the role of memory in personality and clinical psychology Unlike the conventional psychoanalytic approach to memory which concentrates on what is forgotten Singer and Salovey treat memory in a new and different way with an emphasis on what is remembered Theirs is a bold new theory of memory and self that is both comprehensive and accessible

Memory and motivational/emotional processes Antonella Gasbarri, Carlos Tomaz, It is well established that memory for emotional information is generally better than for neutral information This Research Topic comprises a set of papers focusing on memory and its relation with motivational and emotional processes ranging from electroencephalographic evidences of emotional modulation of memory systems to the role of neurotransmitters neuromodulators i e endocannabinoid glucocorticoid serotonin noradrenergic dopaminergic systems and second messengers on emotional memory and the specific involvement of cerebral areas on the relation between memory and motivational emotional processes i e prefrontal cortex amygdala accumbens In particular some of the topics discussed in this Research Topic will include cortical activity correlates of emotional modulation of memory systems interactions between ascending vagal fibers and central noradrenergic systems in modulating memory for emotionally arousing events involvement of prefrontal accumbal catecholamine system in processing emotional and motivational salience role of both negative and positive emotional arousal in increasing persistence of consolidated memories through modulation of second messengers and the involvement of emotional arousal in the activation of amygdala projections that can then modulate different types of memory

Emotional Memory Across the Adult Lifespan Elizabeth A. Kensinger, 2008-12-15 Though many factors can influence the likelihood that we remember a past experience one critical determinant is whether the experience caused us to have an emotional response Emotional experiences are more likely to be remembered than nonemotional ones and over the past couple of decades there has been an increased interest in understanding how emotion conveys this memory benefit This book begins with a broad overview of emotion memory and the neural underpinnings of each providing the reader with an appreciation of the complex interplay between emotion and memory It then examines how emotion influences young adults abilities to store information temporarily or over the long term It explains emotion's influence on the memory processes that young adults use consciously and on the processes that guide young adults preferences and actions without their awareness This book then moves on to describe how each of these influences of emotion are affected by the aging process and by age related disease providing the reader with a lifespan perspective of emotional memory Within each of the domains covered the book integrates research from cognitive psychology cognitive neuroscience and neuropsychological perspectives examining both the behavioral and thought processes that lead to emotion's effects on memory and also the underlying brain processes that guide those influences of emotion This book will be of interest to researchers and graduate

students in memory emotion and aging working in the fields of cognitive psychology cognitive or affective neuroscience and developmental or lifespan psychology *From Whence to Where Understanding Memory- Emotion- Concepts* Bruce Brown,

Emotional Memory Failures Ineke Wessel, Daniel B. Wright, 2004 The beginning of the 1990 s saw a partisan debate about the nature of recovered memories for highly emotional events Some authors claimed that recovered memories of trauma always referred to veridical memories that had been inaccessible for years Others argued that such memories were false by definition and that they were created by therapeutic attempts to uncover trauma that was believed to lie at the root of anxiety or depression Although the debate soon moved to a middle ground both sides fuelled the development of relevant experimental paradigms to explore the mechanisms for how false memories might be created and also how true memories might be forgotten Examples are studies looking at memory implanting false word memory and retrieval induced forgetting in the mid 1990 s Many studies using such paradigms however relied on emotionally neutral material Studies relating to trauma were less readily available Now more and more researchers are bridging this gap testing whether emotive material can be implanted and forgotten and whether there are special populations more susceptible to these effects This special issue brings together papers examining emotion and memory malleability both providing a picture of the state of the art research and pushing the field forward Memory for Everyday and Emotional Events Nancy L. Stein, Charles J. Brainerd, Barbara

Tversky, Peter A. Ornstein, 2018-10-24 The nature of memory for everyday events and the contexts that can affect it are controversial topics being investigated by researchers in cognitive social clinical and developmental lifespan psychology today This book brings many of these researchers together in an attempt to unpack the contextual and processing variables that play a part in everyday memory particularly for emotion laden events They discuss the mental structures and processes that operate in the formation of memory representations and their later retrieval and interpretation *Emotional Memory*

Across the Adult Lifespan Elizabeth A. Kensinger, 2008-12-15 This book explores contemporary research on emotion and memory describing the cognitive and brain processes that support emotional memory in young adults and discussing how those processes change with aging and age related disease Memories, Thoughts, and Emotions William Kessen, Andrew

Ortony, Fergus Craik, 2013-02-01 For the past forty years the ideas and findings of George Mandler and George Mandler himself have been highly influential throughout the field of experimental psychology Not only has he helped to advance the study of cognition and emotion in many ways but he also offered assistance and encouragement to numerous young researchers who may expand on the knowledge acquired thus far The editors of this festschrift feel that one of the greatest strengths of Mandler s work is the blend of European theorizing and American empiricism This volume contains contributions from friends and colleagues who have been influenced in one way or another by this accomplished psychologist
