Handbook of Research on Schools, Schooling and Human Development Judith L. Meece, Jacquelynne S. Eccles, 2010-06-10 Children spend more time in school than in any social institution outside the home. And schools probably exert more influence on children's development and life chances than any environment beyond the home and neighbourhood. The purpose of this book is to document some important ways schools influence children's development and to describe various models and methods for studying schooling effects. Key features include Comprehensive Coverage: this is the first book to provide a comprehensive review of what is known about schools as a context for human development. Topical coverage ranges from theoretical foundations to investigative methodologies and from classroom level influences such as teacher student relations to broader influences such as school organization and educational policies. Cross Disciplinary: this volume brings together the divergent perspectives, methods and findings of scholars from a variety of disciplines among them educational psychology, developmental psychology, school psychology, social psychology, psychiatry, sociology and educational policy.

Chapter Structure: to ensure continuity chapter authors describe 1 how schooling influences are conceptualized, 2 identify their theoretical and methodological approaches, 3 discuss the strengths and weaknesses of existing research and 4 highlight implications for future research practice and policy.

Methodologies: chapters included in the text feature various methodologies including longitudinal studies, hierarchical linear models, experimental and quasi experimental designs and mixed methods.
