**Body, Memory, and Architecture** Kent C. Bloomer,Charles Willard Moore,Robert J. Yudell,Buzz Yudell,1977-01-01 Traces the significance of the human body in architecture from its early place as the divine organizing principle to its present near elimination

*The Destruction of Memory* Robert Bevan,2007-04-20 Crumbled shells of mosques in Iraq the bombing of British cathedrals in World War II the fall of the World Trade Center towers on September 11 when architectural totems such as these are destroyed by conflicts and the ravages of war more than mere buildings are at stake The Destruction of Memory reveals the extent to which a nation weds itself to its landscape Robert Bevan argues that such destruction not only shatters a nation's culture and morale but is also a deliberate act of eradicating a culture's memory and ultimately its existence Bevan combs through world history to highlight a range of wars and conflicts in which the destruction of architecture was pivotal From Cortez's razing of Aztec cities to the carpet bombings of Dresden and Tokyo in World War II to the war in the former Yugoslavia The Destruction of Memory exposes the cultural war that rages behind architectural annihilation revealing that in this subliminal assault lies the complex aim of exterminating a people He provocatively argues for the fatally intertwined experience of genocide and cultural genocide ultimately proposing the elevation of cultural genocide to a crime punishable by international law In an age in which Frank Gehry I M Pei and Frank Lloyd Wright are revered and yet museums and temples of priceless value are destroyed in wars around the world Bevan challenges the notion of collateral damage arguing that it is in fact a deliberate act of war

**Body, Memory, and Architecture** Kent C. Bloomer,1979 **Designing Memory** Sabina Tanović,2019-11-28 This innovative study of memorial architecture investigates how design can translate memories of human loss into tangible structures creating spaces for remembering Using approaches from history psychology anthropology and sociology Sabina Tanović explores purposes behind creating contemporary memorials in a given location their translation into architectural concepts their materialisation in the face of social and political challenges and their influence on the transmission of memory Covering the period from the First World War to the present she looks at memorials such as the Holocaust museums in Mechelen and Drancy as well as memorials for the victims of terrorist attacks to unravel the private and public role of memorial architecture and the possibilities of architecture as a form of agency in remembering and dealing with a difficult past The result is a distinctive contribution to the literature on history and memory and on architecture as a link to the past

**Losing Site** Dr Shelley Hornstein,2013-06-28 As Ruskin suggests in his Seven Lamps of Architecture We may live without architecture and worship without her but we cannot remember without her We remember best when we experience an event in a place But what happens when we leave that place or that place no longer exists This book addresses the relationship between memory and place and asks how architecture captures and triggers memory It explores how architecture exists as a material object and how it registers as a place that we come to remember beyond the

physical site itself. It questions what architecture is in the broadest sense assuming that it is not simply buildings. Rather architecture is considered to be the mapping of physical, mental or emotional space. The idea that we are all architects in some measure as we actively organize and select pathways and markers within space is central to this book's premise. Each chapter provides a different example of the manifold ways in which the physical place of architecture is curated by the architecture in our mental space, our imaginary toolbox when we think of a place and look at a photograph or visit a site and describe it later or send a postcard. By connecting architecture with other disciplines such as geography, visual culture, sociology and urban studies as well as the fine and performing arts, this book puts forward the idea that a conversation about architecture is not exclusively about formal, isolated buildings but instead must be deepened and broadened as spatialized visualizations and experiences of place.

**Between Memory and Invention** Robert A.M. Stern, 2022-03-08. A capsule history of American architecture since 1960. Wall Street Journal Architect historian and educator Robert A.M. Stern presents a personal and candid assessment of contemporary architecture and his fifty years of practice. For more than fifty years Robert A.M. Stern has designed extraordinary buildings around the world. Founding partner of Robert A.M. Stern Architects RAMSA, Stern was once described as the brightest young man I have ever met in my entire teaching career by Philip Johnson and recently called New York City's most valuable architect by Bloomberg. Encompassing autobiography, institutional history and lively behind the scenes anecdotes, *Between Memory and Invention: My Journey in Architecture* surveys the world of architecture from the 1960s to the present and Robert A.M. Stern's critical role in it. The book chronicles Stern's formative years, architectural education and half century of architectural practice, touching on all the influences that shaped him. He details his Brooklyn upbringing, family excursions to look at key twentieth century buildings and relationships with prominent teachers Paul Rudolph and the legendary Vincent Scully, among them. Stern also recounts the origins of RAMSA and major projects in its history, including the new town of Celebration, Florida, the restoration of Times Square and 42nd Street, 15 Central Park West, Benjamin Franklin and Pauli Murray Colleges at Yale and the George W. Bush Presidential Center, as well as references to the many clients, fellow architects and professional partners who have peopled his extraordinary career. By turns thoughtful, critical and irreverent, this accessible, informative account of a life in architecture is replete with personal insights and humor. Stern's voice comes through clearly in the text; he details his youthful efforts to redraw house plans in real estate ads, his relationship to Philip Johnson which began at Yale and was sustained through countless lunches at the Four Seasons, his love of Cole Porter and movies from the 1930s and 1940s, his struggle to launch an architecture practice in the 1970s in the midst of a recession and his complex association with Disney and Michael Eisner. Unsurprisingly, New York City plays a big role in *Between Memory and Invention*. Stern has a deep commitment to the city and recording its past; he is the lead author of the monumental New York book series, the definitive history of architecture and urbanism from the late nineteenth century to the present and shaping its future. Though now a global practice, RAMSA's residential towers rise

throughout Manhattan to enrich the skyline in the tradition of the luxurious apartment buildings of the 1920s and 1930s Supported by a lively mix of images drawn from Stern s personal archive and other resources this much anticipated memoir is interspersed with personal travel slides images of architectural precedents and the colleagues that have shaped his thinking and photographs of the many projects he discusses With a thoughtful afterword by architectural historian Leopoldo Villardi that delves into Stern s process of putting together this extraordinary autobiographical work Between Memory and Invention is a personal candid assessment of a foremost practitioner historian instructor and advocate of architecture today

**Munich and Memory** Gavriel D. Rosenfeld, 2023-12-22 Munich notorious in recent history as the capital of the Nazi movement is the site of Gavriel Rosenfeld s stimulating inquiry into the German collective memory of the Third Reich Rosenfeld shows with the aid of a wealth of photographs how the city s urban form developed after 1945 in direct reflection of its inhabitants evolving memory of the Second World War and the Nazi dictatorship In the second half of the twentieth century the German people s struggle to come to terms with the legacy of Nazism has dramatically shaped nearly all dimensions of their political social and cultural life The area of urban development and the built environment little explored until now offers visible evidence of the struggle By examining the ways in which the people of Munich reconstructed the ruins of their historic buildings created new works of architecture dealt with surviving Nazi buildings and erected new monuments to commemorate the horrors of the recent past Rosenfeld identifies a spectrum of competing memories of the Nazi experience Munich s postwar development was the subject of constant controversy pitting representatives of contending aesthetic and mnemonic positions against one another in the heated battle to shape the city s urban form Examining the debates between traditionalists modernists postmodernists and critical preservationists Rosenfeld shows that the memory of Nazism in Munich has never been repressed but has rather been defined by constant dissension and evolution On balance however he concludes that Munich came to embody in its urban form a conservative view of the past that was inclined to diminish local responsibility for the Third Reich Munich notorious in recent history as the capital of the Nazi movement is the site of Gavriel Rosenfeld s stimulating inquiry into the German collective memory of the Third Reich Rosenfeld shows with the aid of a wealth of photographs how the city s *Spatial Recall* Marc Treib, 2009 Essays from internationally renowned contributors give a variety of perspectives of the role of memory in the built environment how we have read it in the past and how we can create it in the future Essays range from broad topics of message and audience to specific ones of landscape production **The Destruction of Memory** Robert Bevan, 2016-02-15 Crumbled shells of mosques in Iraq the fall of the World Trade Center towers on September 11 when architectural totems such as these are destroyed by conflicts and the ravages of war more than mere buildings are at stake The Destruction of Memory now available in this accessible pocket edition reveals the extent to which a nation weds itself to its landscape Robert Bevan argues that such destruction not only shatters a nation s culture and morale but is also a deliberate act of eradicating a

culture's memory and ultimately its existence. Bevan combs through world history to highlight a range of wars and conflicts in which the destruction of architecture was pivotal. From Cortez's razing of Aztec cities to the carpet bombings of Dresden and Tokyo in World War II to the war in the former Yugoslavia. *The Destruction of Memory* exposes the cultural war that rages behind architectural annihilation, revealing that in this subliminal assault lies the complex aim of exterminating a people. He provocatively argues for the fatally intertwined experience of genocide and cultural genocide, ultimately proposing the elevation of cultural genocide from collateral damage to a crime punishable by international law.

### **Shape as Memory**

Michael Leyton, 2006-05-19 How do buildings store information and experience in their shape and form? Michael Leyton has attracted considerable attention with his interpretation of geometrical form as a medium for the storage of information and memory. In this publication he draws specific conclusions for the field of architecture and construction, attaching fundamental importance to the complex relationship between symmetry and asymmetry. Wie können Gebäudeformen Erfahrungen und Inhalte speichern? Leyton hat eine viel beachtete neue Theorie der geometrischen Form entwickelt. Er interpretiert die geometrische Form im Gegensatz zur gesamten Tradition als Informations- und Gedächtnisträger. In vorliegender Darstellung zieht er die spezifischen Konsequenzen davon für den Bereich der Architektur und des Bauens.

### *The Architecture of the Memory. The Relationship between Form and Content in Chris Ware's "Building Stories"*

Maria Baciu, 2015-11-04  
Studienarbeit aus dem Jahr 2015 im Fachbereich Literaturwissenschaft Moderne Literatur Note 1 Ludwig Maximilians Universität München Institut für Anglistik und Amerikanistik Veranstaltung *Breaking the Form Books Striving not to be Books Sprache Deutsch Abstract*  
The aim of this paper is to provide an analysis of the architecture that Chris Ware employs on every level of the story. Drawn from Ware's statement that the metaphor of architecture runs through our brains and that there's something about the way the mind and the way buildings are structured that are *sic* analogous. Paulson's present analysis illustrates this analogy by looking at both the personal and the spatial dimension of this architectural product. On the one hand the reader is presented a skilful architecture of the mind and feelings of the main character along with the multiple dimensions of the character's memory. In the respective architecture the spatial dimension of the building plays a crucial role since it represents a frame for the main plot, the history of a building and the things that have happened within it like a living organism through time. At the same time the character is framed by the architecture of the building in that it represents a self conscious creative construction on the part of the woman to write for her creative writing class. Millman. The paper will also look at how form is employed to convey content both in terms of the organization of panels and frames on the macro level and of visual narrative perspective monolog and dialog on the micro level. The way in which these elements are combined starting with straightforward manners and ending up to mnemonically complex ones demands that the reader interpret them based on common experience and a history of observation. Eisner 2006 24 The paper's chapters are structured according to the steps followed when building a house: the design, laying the foundation, building the walls, installing the roof,

and finally painting the walls These steps are not exclusively related to the building as such but rather to the entire architecture of the story **Munich and Memory** Gavriel David Rosenfeld,2000 In the ever growing scholarship on German memory after World War II there is nothing comparable to Rosenfeld s impressively researched account of one city s attempt to master the past through reconstruction Rudy Koshar author of Germany s Transient Pasts In his fascinating history of Munich s postwar architectural reconstruction and social de Nazification Gavriel Rosenfeld shows how closely linked the clearing of both rubble and rabble from the German landscape were and how closely Germany s postwar architectural landscape came to resemble its new democratic mindset James E Young author of The Texture of Memory **Spaces of Memory.
