Object Recognition In Man Monkey And Machine:

Object Recognition in Man, Monkey, and Machine Michael J. Tarr, Heinrich H. Bulthoff, 1999-03-15 The contributors bring a wide range of methodologies to bear on the common problem of image based object recognition These interconnected essays on three dimensional visual object recognition present cutting edge research by some of the most creative neuroscientific cognitive and computational scientists in the field Cassandra Moore and Patrick Cavanagh take a classic demonstration the perception of two tone images and turn it into a method for understanding the nature of object representations in terms of surfaces and the interaction between bottom up and top down processes Michael J Tarr and Isabel Gauthier use computer graphics to study whether viewpoint dependent recognition mechanisms can generalize between exemplars of perceptually defined classes Melvyn A Goodale and G Keith Humphrey use innovative psychophysical techniques to investigate dissociable aspects of visual and spatial processing in brain injured subjects D I Perrett M W Oram and E Ashbridge combine neurophysiological single cell data from monkeys with computational analyses for a new way of thinking about the mechanisms that mediate viewpoint dependent object recognition and mental rotation Shimon Ullman also addresses possible mechanisms to account for viewpoint dependent behavior but from the perspective of machine vision Finally Philippe G Schyns synthesizes work from many areas to provide a coherent account of how stimulus class and recognition task interact The contributors bring a wide range of methodologies to bear on the common problem of image based object recognition

Image-based Object Recognition in Man, Monkey and Machine, 1998 **2D Object Detection and Recognition** Yali Amit, 2002 A guide to the computer detection and recognition of 2D objects in gray level images

Object Recognition, Attention, and Action Naoyuki Osaka, Ingo Rentschler, Irving Biederman, 2009-03-12 Human object recognition is a classical topic both for philosophy and for the natural sciences Ultimately understanding of object recognition will be promoted by the cooperation of behavioral research neurophysiology and computation This original book provides an excellent introduction to the issues that are involved It contains chapters that address the ways in which humans and machines attend to recognize and act toward objects in the visual environment

Perception of Faces, Objects, and Scenes Mary A. Peterson, Gillian Rhodes, 2003-05-22 From a barrage of photons we readily and effortlessly recognize the faces of our friends and the familiar objects and scenes around us However these tasks cannot be simple for our visual systems faces are all extremely similar as visual patterns and objects look quite different when viewed from different viewpoints How do our visual systems solve these problems The contributors to this volume seek to answer this question by exploring how analytic and holistic processes contribute to our perception of faces objects and scenes

Intelligent Autonomous Systems 7 Maria Gini, 2002 The goal of the Seventh International Conference on Intelligent Autonomous Systems IAS 7 was to exchange and stimulate research ideas that make future robots and systems more intelligent and autonomous This volume of proceedings contains 71 technical papers by authors from 15 countries *Bio-Inspired*

Applications of Connectionism Jose Mira, Alberto Prieto, 2003-06-29 Underlying most of the IWANN calls for papers is the aim to reassume some of the motivations of the groundwork stages of biocybernetics and the later bionics formulations and to try to reconsider the present value of two basic questions The first is What does neuroscience bring into computation the new bionics That is to say how can we seek inspiration in biology Titles such as computational intelligence artificial neural networks genetic algorithms evolutionary hardware evolvable architectures embryonics sensory non-morphic systems and emotional robotics are representatives of the present interest in biological electronics bionics The second question is What can return computation to neuroscience the new neurocybernetics That is to say how can mathematics electronics computer science and artificial intelligence help the neurobiologists to improve their experimental data modeling and to move a step forward towards the understanding of the nervous system Relevant here are the general philosophy of the IWANN conferences the sustained interdisciplinary approach and the global strategy again and again to bring together physiologists and computer experts to consider the common and pertinent questions and the shared methods to answer these questions

What can simple brains teach us about how vision works Davide Zoccolan, David D. Cox, Andrea Benucci, R. Clay Reid, 2015-11-18 Vision is the process of extracting behaviorally relevant information from patterns of light that fall on retina as the eyes sample the outside world Traditionally nonhuman primates macaque monkeys in particular have been viewed by many as the animal model of choice for investigating the neuronal substrates of visual processing not only because their visual systems closely mirror our own but also because it is often assumed that simpler brains lack advanced visual processing machinery However this narrow view of visual neuroscience ignores the fact that vision is widely distributed throughout the animal kingdom enabling a wide repertoire of complex behaviors in species from insects to birds fish and mammals Recent years have seen a resurgence of interest in alternative animal models for vision research especially rodents This resurgence is partly due to the availability of increasingly powerful experimental approaches e.g. optogenetics and two-photon imaging that are challenging to apply to their full potential in primates Meanwhile even more phylogenetically distant species such as birds fish and insects have long been workhorse animal models for gaining insight into the core computations underlying visual processing In many cases these animal models are valuable precisely because their visual systems are simpler than the primate visual system Simpler systems are often easier to understand and studying a diversity of neuronal systems that achieve similar functions can focus attention on those computational principles that are universal and essential This Research Topic provides a survey of the state of the art in the use of animal models of visual functions that are alternative to macaques It includes original research methods articles reviews and opinions that exploit a variety of animal models including rodents birds fishes and insects as well as small New World monkey the marmoset to investigate visual function The experimental approaches covered by these studies range from psychophysics and electrophysiology to histology and genetics testifying to the richness and depth of visual neuroscience in non-macaque species [Springer Handbook of](#)

Robotics Bruno Siciliano, Oussama Khatib, 2008-05-20 With the science of robotics undergoing a major transformation just now Springer's new authoritative handbook on the subject couldn't have come at a better time Having broken free from its origins in industry robotics has been rapidly expanding into the challenging terrain of unstructured environments Unlike other handbooks that focus on industrial applications the Springer Handbook of Robotics incorporates these new developments Just like all Springer Handbooks it is utterly comprehensive edited by internationally renowned experts and replete with contributions from leading researchers from around the world The handbook is an ideal resource for robotics experts but also for people new to this expanding field

Object Categorization Sven J. Dickinson, 2009-09-07 This edited volume presents a unique multidisciplinary perspective on the problem of visual object categorization The result of a series of four highly successful workshops on the topic the book gathers many of the most distinguished researchers from both computer and human vision to reflect on their experience identify open problems and foster a cross disciplinary discussion with the idea that parallel problems and solutions have arisen in both domains Twenty seven of these workshop speakers have contributed chapters including fourteen from computer vision and thirteen from human vision Their contributions range from broad perspectives on the problem to more specific approaches collectively providing important historical context identifying the major challenges and presenting recent research results This multidisciplinary collection is the first of its kind on the topic of object categorization providing an outstanding context for graduate students and researchers in both computer and human vision

Exploring Brain Functions T. A. Poggio, D. A. Glaser, 1993-04-27

Exploring Brain Functions Models in Neuroscience Edited by T A Poggio and D A Glaser This volume consists of the background papers and reports of discussion from the Dahlem Workshop It focuses on the identification of appropriate models for brain functions and ways of evaluating them A unique combination of key researchers involved in theoretical and experimental neurobiology addressed these issues from the following perspectives Molecular and biophysical mechanisms of information processing Forms and mechanisms of learning Models of visual perception case studies in brain functions and Architectures of intelligent systems This book provides a timely assessment of the state of theories involving the brain and their role in neuroscience today and tomorrow from the point of view of theoreticians and experimentalists alike

Neural Computation, 2006

The Quarterly Journal of Experimental Psychology, 2002

Localization of Clinical Syndromes in Neuropsychology and Neuroscience Joseph M. Tonkonogy, Antonio E. Puente, 2009-01-23 Localization refers to the relationship between the anatomical structures of the brain and their corresponding psychological or behavioral functions

Throughout the history of neuropsychology there has been considerable debate over how localized mental functions truly are. By the mid 20th century a formidable amount of evidence strongly supported the modularity hypothesis that psychological functions such as language and memory reside in specific neuroanatomical areas. Recent neuroimaging studies suggest a more holistic view that psychological functions are distributed and dynamically organized across multiple brain regions. This book attempts to reconcile the classic and modern approaches, arguing that newer imaging techniques must be used in conjunction with rather than replace traditional neuropsychology approaches such as interviewing, testing, and autopsy exams. Only by triangulating these approaches can neuropsychologists begin to understand the complex relationship between brain structure and mental function that is exhibited across the spectrum of neurological disorders. The perspective offered by Drs. Tonkonogy and Puente on this philosophical and scientific debate is a provocative counterargument to current research that overemphasizes imaging studies to the exclusion of other useful techniques. Key features: Offers systematic descriptions of the clinical manifestations, anatomical data, and history of the various approaches to neuropsychological syndromes. Differentiates syndromes characterized by disturbances of conventional versus unconventional information processing. Examines both traditional and modern approaches to new neuropsychological syndromes: social agnosia, social apraxia, and agnosia of actions, as well as memory disorders, visual disorders, and more. An indispensable resource for clinicians and researchers in neuropsychology and neuroscience, this book serves as a solid frame of reference for the localization of clinical neuropsychological symptoms.

Object Recognition In Man Monkey And Machine Introduction

In the digital age, access to information has become easier than ever before. The ability to download Object Recognition In Man Monkey And Machine has revolutionized the way we consume written content. Whether you are a student looking for course material, an avid reader searching for your next favorite book, or a professional seeking research papers, the option to download Object Recognition In Man Monkey And Machine has opened up a world of possibilities. Downloading Object Recognition In Man Monkey And Machine provides numerous advantages over physical copies of books and documents. Firstly, it is incredibly convenient. Gone are the days of carrying around heavy textbooks or bulky folders filled with papers. With the click of a button, you can gain immediate access to valuable resources on any device. This convenience allows for efficient studying, researching, and reading on the go. Moreover, the cost-effective nature of downloading Object Recognition In Man Monkey And Machine has democratized knowledge. Traditional books and academic journals can be expensive, making it difficult for individuals with limited financial resources to access information. By offering free PDF downloads, publishers and authors are enabling a wider audience to benefit from their work. This inclusivity promotes equal opportunities for learning and personal growth. There are numerous websites and platforms where individuals can download Object Recognition In Man Monkey And Machine. These websites range from academic databases offering research papers and journals to online libraries with an expansive collection of books from various genres. Many authors and publishers also upload their work to specific websites, granting readers access to their content without any charge. These platforms not only provide access to existing literature but also serve as an excellent platform for undiscovered authors to share their work with the world. However, it is essential to be cautious while downloading Object Recognition In Man Monkey And Machine. Some websites may offer pirated or illegally obtained copies of copyrighted material. Engaging in such activities not only violates copyright laws but also undermines the efforts of authors, publishers, and researchers. To ensure ethical downloading, it is advisable to utilize reputable websites that prioritize the legal distribution of content. When downloading Object Recognition In Man Monkey And Machine, users should also consider the potential security risks associated with online platforms. Malicious actors may exploit vulnerabilities in unprotected websites to distribute malware or steal personal information. To protect themselves, individuals should ensure their devices have reliable antivirus software installed and validate the legitimacy of the websites they are downloading from. In conclusion, the ability to download Object Recognition In Man Monkey And Machine has transformed the way we access information. With the convenience, cost-effectiveness, and accessibility it offers, free PDF downloads have become a popular choice for students, researchers, and book lovers worldwide. However, it is crucial to engage in ethical downloading practices and prioritize personal security when utilizing online platforms. By doing so, individuals can make the most of the vast array of free PDF resources available and embark on a journey of continuous learning and intellectual growth.
