Ohring Thin Films Solution Manual:

Solutions Manual to accompany Engineering Materials Science Milton Ohring, 2014-06-28 Solutions Manual to Accompany Engineering Materials Science provides information pertinent to the fundamental aspects of materials science. This book presents a compilation of solutions to a variety of problems or issues in engineering materials science. Organized into 15 chapters this book begins with an overview of the approximate added value in a contact lens manufactured from a polymer. This text then examines several problems based on the electron energy levels for various elements. Other chapters explain why the lattice constants of materials can be determined with extraordinary precision by X ray diffraction but with constantly less precision and accuracy using electron diffraction techniques. This book discusses as well the formula for the condensation reaction between urea and formaldehyde to produce thermosetting urea formaldehyde. The final chapter deals with the similarities between electrically and mechanically functional materials with regard to reliability issues. This book is a valuable resource for engineers students and research workers.

The Materials Science of Thin Films Milton

Ohring, 1992 Prepared as a textbook complete with problems after each chapter specifically intended for classroom use in universities.

Electromigration in ULSI Interconnections Cher Ming Tan, 2010 Electromigration in ULSI Interconnections provides a comprehensive description of the electro migration in integrated circuits. It is intended for both beginner and advanced readers on electro migration in ULSI interconnections. It begins with the basic knowledge required for a detailed study on electro migration and examines the various interconnected systems and their evolution employed in integrated circuit technology. The subsequent chapters provide a detailed description of the physics of electro migration in both Al and Cu based Interconnections in the form of theoretical experimental and numerical modeling studies. The differences in the electro migration of Al and Cu based interconnections and the corresponding underlying physical mechanisms for these differences are explained. The test structures testing methodology failure analysis methodology and statistical analysis of the test data for the experimental studies on electro migration are presented in a concise and rigorous manner. Methods of numerical modeling for the interconnect electro migration and their applications to the understanding of electro migration physics are described in detail with the aspects of material properties interconnection design and interconnect process parameters on the electro migration performances of interconnects in ULSI further elaborated upon. Finally the extension of the studies to narrow interconnections is introduced and future challenges on the study of electro migration are outlined and discussed.
