Organic Computing Understanding Complex Systems:

Organic Computing Rolf P. Würtz, 2008-10-21 In this book the major ideas behind Organic Computing are delineated together with a sparse sample of computational projects undertaken in this new field Biological metaphors include evolution neural networks gene regulatory networks networks of brain modules hormone system insect swarms and ant colonies Applications are as diverse as system design optimization artificial growth task allocation clustering routing face recognition and sign language understanding Polystochastic Models for Complexity Octavian Iordache, 2010-04-19 This book is devoted to complexity understanding and management considered as the main source of efficiency and prosperity for the next decades Divided into six chapters the book begins with a presentation of basic concepts as complexity emergence and closure The second chapter looks to methods and introduces polystochastic models the wave equation possibilities and entropy The third chapter focusing on physical and chemical systems analyzes flow sheet synthesis cyclic operations of separation drug delivery systems and entropy production Biomimetic systems represent the main objective of the fourth chapter Case studies refer to bio inspired calculation methods to the role of artificial genetic codes neural networks and neural codes for evolutionary calculus and for evolvable circuits as biomimetic devices The fifth chapter taking its inspiration from systems sciences and cognitive sciences looks to engineering design case base reasoning methods failure analysis and multi agent manufacturing systems Perspectives and integrative points of view are discussed in the sixth chapter with reference to the classification of sciences cybernetics and its extensions and to transdisciplinarity and categorification Written for engineers researchers and students in chemical biochemical computing and systems science engineering in neuroscience psychology philosophy and mathematics Distributed, Parallel and Biologically Inspired Systems Mike Hinchey, Bernd Kleinjohann, Lisa Kleinjohann, Peter Lindsay, Franz J. Rammig, Jon Timmis, Marilyn Wolf, 2010-08-06 st This volume contains the proceedings of two conferences held as part of the 21 IFIP World Computer Congress in Brisbane Australia 20 23 September 2010 th The first part of the book presents the proceedings of DIPES 2010 the 7 IFIP Conference on Distributed and Parallel Embedded Systems The conference introduced in a separate preface by the Chairs covers a range of topics from specification and design of embedded systems through to dependability and fault tolerance rd The second part of the book contains the proceedings of BICC 2010 the 3 IFIP Conference on Biologically Inspired Collaborative Computing The conference is concerned with emerging techniques from research areas such as organic computing autonomic computing and self adaptive systems where inspiration for techniques rises from exhibited behaviour in nature and biology Such techniques require the use of research developed by the DIPES community in supporting collaboration over multiple systems We hope that the combination of the two proceedings will add value for the reader and advance our related work

Advances in Intelligent Process-Aware Information Systems Gregor Grambow, Roy Oberhauser, Manfred Reichert, 2017-05-22 This book provides a state of the art perspective on intelligent process aware information systems and

presents chapters on specific facets and approaches applicable to such systems Further it highlights novel advances and developments in various aspects of intelligent process aware information systems and business process management systems Intelligence capabilities are increasingly being integrated into or created in many of today s software products and services Process aware information systems provide critical computing infrastructure to support the various processes involved in the creation and delivery of business products and services Yet the integration of intelligence capabilities into process aware information systems is a non trivial yet necessary evolution of these complex systems The book s individual chapters address adaptive process management case management processes autonomically capable processes process oriented information logistics process recommendations reasoning over process models process portability and business process intelligence The primary target groups are researchers and PhD Master students in the field of information systems

Growing Adaptive Machines Taras Kowaliw,Nicolas Bredeche,René Doursat,2014-06-04 The pursuit of artificial intelligence has been a highly active domain of research for decades yielding exciting scientific insights and productive new technologies In terms of generating intelligence however this pursuit has yielded only limited success This book explores the hypothesis that adaptive growth is a means of moving forward By emulating the biological process of development we can incorporate desirable characteristics of natural neural systems into engineered designs and thus move closer towards the creation of brain like systems The particular focus is on how to design artificial neural networks for engineering tasks The book consists of contributions from 18 researchers ranging from detailed reviews of recent domains by senior scientists to exciting new contributions representing the state of the art in machine learning research The book begins with broad overviews of artificial neurogenesis and bio inspired machine learning suitable both as an introduction to the domains and as a reference for experts Several contributions provide perspectives and future hypotheses on recent highly successful trains of research including deep learning the Hyper NEAT model of developmental neural network design and a simulation of the visual cortex Other contributions cover recent advances in the design of bio inspired artificial neural networks including the creation of machines for classification the behavioural control of virtual agents the design of virtual multi component robots and morphologies and the creation of flexible intelligence Throughout the contributors share their vast expertise on the means and benefits of creating brain like machines This book is appropriate for advanced students and practitioners of artificial intelligence and machine learning

Swarm Intelligence Marco Dorigo,Thomas Stützle,Maria J. Blesa,Christian Blum,Heiko Hamann,Mary Katherine Heinrich,Volker Strobel,2020-10-22 This book constitutes the proceedings of the 12th International Conference on Swarm Intelligence ANTS 2020 held online due to COVID 19 in Barcelona Spain in October 2020 The 20 full papers presented together with 8 short papers and 5 extended abstracts were carefully reviewed and selected from 50 submissions ANTS 2020 contributions are dealing with any aspect of swarm intelligence

Dynamically Reconfigurable Systems Marco Platzner,Norbert Wehn,2010-03-10 Dynamically Reconfigurable Systems is the first ever to

focus on the emerging field of Dynamically Reconfigurable Computing Systems While programmable logic and design time configurability are well elaborated and covered by various texts this book presents a unique overview over the state of the art and recent results for dynamic and run time reconfigurable computing systems Reconfigurable hardware is not only of utmost importance for large manufacturers and vendors of microelectronic devices and systems but also a very attractive technology for smaller and medium sized companies Hence Dynamically Reconfigurable Systems also addresses researchers and engineers actively working in the field and provides them with information on the newest developments and trends in dynamic and run time reconfigurable systems Autonomic Computing Philippe Lalanda, Julie A. McCann, Ada

Diaconescu, 2013-05-13 This textbook provides a practical perspective on autonomic computing Through the combined use of examples and hands on projects the book enables the reader to rapidly gain an understanding of the theories models design principles and challenges of this subject while building upon their current knowledge Features provides a structured and comprehensive introduction to autonomic computing with a software engineering perspective supported by a downloadable learning environment and source code that allows students to develop execute and test autonomic applications at an associated website presents the latest information on techniques implementing self monitoring self knowledge decision making and self adaptation discusses the challenges to evaluating an autonomic system aiding the reader in designing tests and metrics that can be used to compare systems reviews the most relevant sources of inspiration for autonomic computing with pointers towards more extensive specialty literature **Organic Computing – A Paradigm Shift for Complex**

Systems Christian Müller-Schloer, Hartmut Schmeck, Theo Ungerer, 2011-04-29 Organic Computing has emerged as a challenging vision for future information processing systems Its basis is the insight that we will increasingly be surrounded by and depend on large collections of autonomous systems which are equipped with sensors and actuators aware of their environment communicating freely and organising themselves in order to perform actions and services required by the users These networks of intelligent systems surrounding us open fascinating application areas and at the same time bear the problem of their controllability Hence we have to construct such systems as robust safe flexible and trustworthy as possible In particular a strong orientation towards human needs as opposed to a pure implementation of the technologically possible seems absolutely central The technical systems which can achieve these goals will have to exhibit life like or organic properties Organic Computing Systems adapt dynamically to their current environmental conditions In order to cope with unexpected or undesired events they are self organising self configuring self optimising self healing self protecting self explaining and context aware while offering complementary interfaces for higher level directives with respect to the desired behaviour First steps towards adaptive and self organising computer systems are being undertaken Adaptivity reconfigurability emergence of new properties and self organisation are hot topics in a variety of research groups worldwide This book summarises the results of a 6 year priority research program SPP of the German Research Foundation DFG
