The Borderlands of Science Michael Shermer,2001-05-17

As author of the bestselling Why People Believe Weird Things and How We Believe and Editor in Chief of Skeptic magazine Michael Shermer has emerged as the nation s number one scourge of superstition and bad science Now in The Borderlands of Science he takes us to the place where real science such as the big bang theory borderland science superstring theory and just plain nonsense Big Foot collide with one another Shermer argues that science is the best lens through which to view the world but he recognizes that it s often difficult for most of us to tell where valid science leaves off and borderland science begins To help us Shermer looks at a range of topics that put the boundary line in high relief For instance he discusses the many theories of everything that try to reduce the complexity of the world to a single principle and shows how most fall into the category of pseudoscience He examines the work of Darwin and Freud explaining why one is among the great scientists in history while the other has become nothing more than a historical curiosity He also shows how Carl Sagan s life exemplified the struggle we all face to find a balance between being open minded enough to recognize radical new ideas but not so open minded that our brains fall out And finally he reveals how scientists themselves can be led astray as seen in the infamous Piltdown Hoax Michael Shermer s enlightening volume will be a valuable aid to anyone bewildered by the many scientific theories swirling about It will help us stay grounded in common sense as we try to evaluate everything from SETI and acupuncture to hypnosis and cloning

**Predicting Species Occurrences** J. Michael Scott, Patricia Heglund, Michael L. Morrison, 2002-02. Predictions about where different species are, where they are not, and how they move across a landscape or respond to human activities if timber is harvested for instance or stream flow altered are important aspects of the work of wildlife biologists, land managers and the agencies and policymakers that govern natural resources. Despite the increased use and importance of model predictions, these predictions are seldom tested and have unknown levels of accuracy. *Predicting Species Occurrences* addresses those concerns, highlighting for managers and researchers the strengths and weaknesses of current approaches as well as the magnitude of the research required to improve or test predictions of currently used models. The book is an outgrowth of an international symposium held in October 1999 that brought together scientists and researchers at the forefront of efforts to process information about species at different spatial and temporal scales. It is a comprehensive reference that offers an exhaustive treatment of the subject with 65 chapters by leading experts from around the world that review the history of the theory and practice of modeling and present a standard terminology, examine temporal and spatial scales in terms of their influence on patterns and processes of species distribution, offer detailed discussions of state-of-the-art modeling tools and descriptions of methods for assessing model accuracy, discuss how to predict species presence and abundance, present examples of how spatially explicit data on demographics can provide important information for managers. An introductory chapter by Michael A. Huston examines the ecological context in which predictions of species occurrences are made and a concluding chapter by John A. Wiens offers an insightful review and synthesis of the topics examined along with guidance for future directions and cautions regarding misuse of models. Other contributors include Michael P. Austin, Barry R. Noon, Alan H. Fielding, Michael Goodchild, Brian A. Maurer, John T. Rotenberry, Paul Angermeier, Pierre R. Vernier and more than a hundred others. *Predicting Species Occurrences* offers important new information about many of the topics.

raised in the seminal volume *Wildlife 2000* University of Wisconsin Press 1986 and will be the standard reference on this subject for years to come Its state of the art assessment will play a key role in guiding the continued development and application of tools for making accurate predictions and is an indispensable volume for anyone engaged in species management or conservation ***The Comics Journal*** ,2007 ***The Crisis and Renewal of U.S. Capitalism*** Laurence Cossu-Beaumont,Jacques-Henri Coste,Jean-Baptiste Velut,2015-12-22 Despite the reversal of America s fortune from the triumphalism of the Roaring Nineties to the gloom of the lost decade and the Great Depression theoretical conceptions of US capitalism have remained surprisingly unchanged In fact if the crisis questioned the sustainability of the US capitalist paradigm it did not fundamentally challenge academic theorization of American political economy This book departs from the American political economy literature to identify three common myths that have shaped our conceptualization of US capitalism its reduction to a state market dyad dis embedded from societal factors the illusion of a weak state and the synchronic conception of the US variety of capitalism To remedy these pitfalls the authors propose a civilizational approach to American political economy at the crossroads between cultural studies history sociology and political science Drawing together contributions from a rich variety of fields from geography to cultural studies political science and sociology this work sheds a new light on America s cultural political economy combining theoretical reflection with empirical data and offering innovative perspectives on the crisis and renewal of American capitalism ***Defending Illusions*** Allan K. Fitzsimmons,1999 Fitzsimmons examines the science philosophy and law of ecosystems management and shows how efforts to make federal protection of ecosystems the centerpiece of national environmental policy are driven by religious veneration of Mother Earth wrapped in a veil of weak science ***Managing Growth in the 1980's*** Robert D. Hamrin,1980 ***The Sane Alternative*** James Robertson,1978 ***The Catholic World*** ,1989 ***Macroeconomics*** Wendy Carlin,David Soskice,2006 This volume provides a unified framework for the analysis of short and medium run macroeconomics It develops a core New Keynesian macro model based on imperfect competition and nominal rigidities and shows how this compares with alternatives ***IETE Journal of Research*** ,2003 ***Marketing Management*** Peter R. Dickson,1997 This edition presents marketing management concepts in a traditional format and includes many real world examples emphasizing topics such as international marketing ethics cross functional teams and quality Integrating competitive rationality throughout the text the book also covers strengthening customer relations by outshining the competition in customer satisfaction finding more efficient and less costly ways to deliver the same customer benefits and service and improving general decision making implementation skills ***Strategic Management and Organisational Dynamics*** Ralph D. Stacey,2003 In this fourth edition the author continues to question the view that organizations operate and succeed in relatively stable environments He argues that they must create new perspectives and learn from the chaos within which they operate
