SECTION I: What is Excel?

Microsoft Excel is a spreadsheet application that is commonly used for a variety of uses. At its core, it is a table consisting of rows and columns. Excel is composed of rows and columns and uses a spreadsheet display data. Features include: calculations, graphing tools, pivot tables, and a macro programming language called Visual Basic for Applications.

What can I do with this?

The data within a table can be sorted by any column, which means that the rows can be ordered by 1 name or first name alphabetically, by the ID number ascending or descending, by the amount paid ascending or descending, or by the date. You can also filter the data in the table to have only specific values show.

SECTION II: Cells, Rows, and Columns

What is a cell?

A cell, outlined in green below, is an individual block within a table in which you can enter values, or words or numbers.

What are rows and columns?

Rows, outlined in red below, are a horizontal group of cells. Columns, outlined in blue below, are a vertical group of cells.
