**Instant Insights: Nutritional benefits of milk** Dr Jan Geurts, Shane V. Crowley, Dr James A. O'Mahony, Patrick F. Fox, Young W. Park, Prof Michael Gänzle, 2023-02-21 This collection features four peer reviewed reviews on the nutritional benefits of milk The first chapter highlights the important role of milk and dairy products in human diets due to the amount of energy calories they provide and their ability to compensate for foods in the diet with lesser nutritional value The chapter also reviews the dairy matrix concept and how this matrix can influence human physiology The second chapter provides an overview of major and minor milk proteins including caseins whey proteins and indigenous milk enzymes The chapter discusses a selection of milk protein products which are produced on an industrial scale to support human health

and growth such as the use of whey protein in infant formula and dietary supplements The third chapter reviews current knowledge on bioactive components existing in cow s milk and colostrum their biological and nutritional functionalities as well as how these components can be exploited for the benefit of human health and physiological metabolism function The final chapter provides an overview of the nutritional properties of dairy carbohydrates and major glycoproteins in cow s milk The chapter considers the contribution of lactose as a substrate for beneficial colonic fermentation to short chain fatty acids as well as the importance of glycoproteins in infant diets      **Casein** Mamdouh El-Bakry,Bhavbhuti M. Rostamabadi,Navin Kumar Rastogi,2025-06-09 **Non thermal Processing of Major Food Macromolecules** provides comprehensive knowledge on state of the art approaches utilized to process foods and or modify their physicochemical structural along with the technofunctional attributes of food macromolecules i e protein starch lipids through novel non thermal processing techniques Sections explore the impact of non thermal processing on proteins starches and on lipids and present the challenges for the food application of non thermal processing treatments thus suggesting how to push the food application of these architectures forward around the world Edited by a team of experts in the field this book is a great resource for researchers and industry personnel working in the various fields of non thermal processing treatments particularly in the food areas Discusses the effects of non thermal processing on food macromolecules Includes the following techniques sonication high pressure processing ozonation PEF irradiation and cold plasma treatment Presents the regulatory considerations for implementation of non thermal processing Covers safety issues and health risks associated with the use of non thermal processing techniques Offers new information on how non thermal processing treatment of foods can affect consumer acceptance      *Nutrient Delivery* Alexandru Grumezescu,2016-08-12 **Nutrient Delivery Nanotechnology in the Agri**

**Food Industry Volume Five** discusses the fabrication merits demerits applications and bioavailability enhancement mechanisms of various nanodelivery systems Recent developments in various nanodelivery systems are also highlighted Volume 5 contains twenty chapters prepared by outstanding international researchers from Argentina Brazil Canada China Croatia India Iran Ireland M xico Pakistan Portugal Serbia Sri Lanka and the United States In recent years the delivery of

micronutrients at nanoscale has been widely studied as these systems have the potential to improve bioavailability enable controlled release and enhance stability of food bioactives to a greater extent The nanodelivery systems typically consist of the food bioactive compound encapsulated and stabilized in food grade ingredients such as lipids proteins or polysaccharides with diameters ranging from 10 nm to 1000 nm Among these the lipid based delivery systems such as nanoemulsions solid lipid nanoparticles nanoliposomes and micelles are widely studied for the delivery of lipophilic bioactive compounds These delivery vehicles improve the solubility permeability stability and bioavailability of the lipophilic compounds thereby enhancing their potential for oral delivery and functional food development On the other hand the hydrophilic bioactives are delivered through protein polysaccharide or biopolymer based colloidal nanosystems such as hydrogels nanogels and polymer nanoparticles The major concern other than solubility is the intestinal permeability of the micronutrients For instance the delivery system for compounds with poor intestinal permeability and low solubility need to be carefully designed using suitable lipids and surfactants Offers updated material for undergraduate and postgraduate students in food science biotechnology and related engineering fields Provides a valuable resource of recent scientific progress along with most known applications of nanomaterials in the food industry for researchers engineers and academics Includes novel opportunities and ideas for developing or improving technologies in the food industry
