*Ludicrous* Edward Niedermeyer,2019-08-20 Tesla is the most exciting car company in a generation but can it live up to the hype Tesla Motors and CEO Elon Musk have become household names shaking up the staid auto industry by creating a set of innovative electric vehicles that have wowed the marketplace and defied conventional wisdom The company s market valuation now rivals that of long established automakers and to many industry observers Tesla is defining the future of the industry But behind the hype Tesla has some serious deficiencies that raise questions about its sky high valuation and even its ultimate survival Tesla s commitment to innovation has led it to reject the careful zero defects approach of other car manufacturers even as it struggles to mass produce cars reliably and with minimal defects While most car manufacturers struggle with the razor thin margins of mid priced sedans Tesla s strategy requires that the Model 3 finally bring it to profitability even as the high priced Roadster and Model S both lost money And Tesla s approach of continually focusing on the future even as commitments and deadlines are repeatedly missed may ultimately test the patience of all but its most devoted fans In *Ludicrous* journalist and auto industry analyst Edward Niedermeyer lays bare the disconnect between the popular perception of Tesla and the day to day realities of the company and the cars it produces Blending original reporting

Penna,2019-09-18 This book presents a global and historical perspective of energy flows during the last millennium The search for sustainable energy is a key issue dominating today s energy regime This book details the historical evolution of energy following the overlapping and slow flowing transitions from one regime to another In doing so it seeks to provide insight into future energy transitions and the means of utilizing sustainable energy sources to reduce humanity s fossil fuel footprint The book begins with an examination of the earliest and most basic forms of energy use namely that of humans metabolizing food in order to work with the first transition following the domestication and breeding of horses and other animals The book also examines energy sources key to development during the industrialization and mechanization such as wood and coal as well as more recent sources such as crude oil and nuclear energy The book then assesses energy flows that are at the forefront of sustainability by examining green sources such as solar wind power and hydropower While it is easy to see energy flows in terms of revolutions transitions have taken centuries to evolve and transitions are never fully global as for example wood remains the primary fuel source for cooking in much of the developing world This book not only demonstrates the longevity of energy transitions but also discusses the possibility for reducing transition times when technological developments provide inexpensive and safe energy sources that can reduce the dependency on fossil fuels This book will be of great interest to students and scholars of energy transitions sustainable energy and environmental and energy history      *Business Week* ,2006-05      *Scientific American* ,1895      Electrical Engineer ,1897      **Public Opinion** ,1895      *Gas Age* ,1894 Includes summaries of proceedings and addresses of annual meetings of various gas associations L C set includes an index to these proceedings 1884 1902 issued as a supplement to Progressive age Feb 15 1910      *Electricity* ,1895      **The Electrical Engineer** ,1893      **The American Gas Light Journal** ,1897      The Times Index ,2013-06 Indexes the Times Sunday times and magazine Times literary supplement Times educational supplement Time educational supplement Scotland and the Times higher education supplement      *The New York Times Index* ,2009      The Street Railway Journal ,1892
