**Advances in Intelligent Control Systems and Computer Science** Loan Dumitrache,2012-08-22 The conception of real time control networks taking into account as an integrating approach both the specific aspects of information and knowledge processing and the dynamic and energetic particularities of physical processes and of communication networks is

representing one of the newest scientific and technological challenges The new paradigm of Cyber Physical Systems CPS reflects this tendency and will certainly change the evolution of the technology with major social and economic impact This book presents significant results in the field of process control and advanced information and knowledge processing with applications in the fields of robotics biotechnology environment energy transportation et al It introduces intelligent control concepts and strategies as well as real time implementation aspects for complex control approaches One of the sections is dedicated to the complex problem of designing software systems for distributed information processing networks Problems as complexity and specific instruments for modeling and control are also presented in a group of papers which identifies a large opening towards the new generation of CPS The book is structured so as to ensure a good equilibrium between conceptual and applicative aspects

**Linux** Rheinwerk Publishing, Inc, Michael Kofler, 2025-06-17 Master Linux installation shell scripting system tuning and server setup with clear practical guidance for all skill levels Key Features Comprehensive content spanning from installation to server configuration ensures wide applicability Detailed shell scripting sections explain core concepts for automation In depth system and network administration guidance covers real world scenarios Book Description This guide begins with Linux fundamentals including an overview of its history distributions and installation methods Readers learn to install Linux on various hardware configurations while understanding open source licensing and partitioning The book then introduces desktop environments like GNOME and KDE showing how to navigate and customize them for productivity Building on this foundation readers develop command line proficiency mastering terminal usage and shell scripting with Bash and Zsh The book covers file and process management network tools and package management giving readers confidence to optimize and secure their systems Later chapters dive into system administration topics such as kernel compilation bootloader configuration and virtualization with VirtualBox and QEMU Finally the book focuses on server installation secure shell configuration web and mail server setup and file sharing via Samba It also addresses backup strategies firewall setup and security enhancements with SELinux and AppArmor preparing readers to maintain reliable secure Linux environments in professional or personal contexts What you will learn Install and configure Linux on various popular distributions Customize and operate GNOME and KDE desktop environments efficiently Create debug and automate tasks using Bash and Zsh shell scripts Manage files permissions and processes through command line tools Set up and secure network services including SSH and Apache servers Deploy virtual machines and maintain Linux servers with best practices Who this book is for This book is designed for learners eager to understand Linux deeply from beginners to intermediate users It is ideal for hobbyists IT professionals and students with basic computer literacy who want to progress from installation through system configuration to advanced server and security management

took place in Dresden Germany during August 25-29, 2025. The 78 papers included in these proceedings were carefully reviewed and selected from 264 submissions. They were organized in topical sections as follows: Part I: Programming, compilers, and performance scheduling; resource management; cloud, edge computing, and workflows; Part II: Architectures and accelerators; data analytics; AI and computational science; Part III: Theory and algorithms; multidisciplinary domain specific and applied parallel and distributed computing.

Computer Hardware Pavel Bartoš, 1991. When writing this book we tried to create a material that would serve as a comprehensive guide to the world of computer hardware. Our goal was to offer readers not only theoretical knowledge but also practical skills that can be used in real situations. We believe that this textbook will be useful not only for high school students but also for the general public who are interested in technologies and their applications. When creating the content we were based on many years of experience in education and practice in the field of information technology. We tried to cover a wide range of topics from basic components of a personal computer to more complex issues such as overclocking microprocessors or configuring RAID systems. Each topic is supplemented with practical examples and exercises that help to better understand the given issue.

**ECCWS 2023 22nd European Conference on Cyber Warfare and Security** Antonios Andreatos, Christos Douligeris, 2023-06-22. *Build a Large Language Model (From Scratch)* Sebastian Raschka, 2024-10-29. Learn how to create, train, and tweak large language models (LLMs) by building one from the ground up. In *Build a Large Language Model from Scratch*, bestselling author Sebastian Raschka guides you step by step through creating your own LLM. Each stage is explained with clear text diagrams and examples. You'll go from the initial design and creation to pretraining on a general corpus and on to fine-tuning for specific tasks. *Build a Large Language Model from Scratch* teaches you how to plan and code all the parts of an LLM: Prepare a dataset suitable for LLM training; Fine-tune LLMs for text classification and with your own data; Use human feedback to ensure your LLM follows instructions; Load pre-trained weights into an LLM. *Build a Large Language Model from Scratch* takes you inside the AI black box to tinker with the internal systems that power generative AI. As you work through each key stage of LLM creation, you'll develop an in-depth understanding of how LLMs work, their limitations, and their customization methods. Your LLM can be developed on an ordinary laptop and used as your own personal assistant. About the technology: Physicist Richard P. Feynman reportedly said, "I don't understand anything, I can't build it." Based on this same powerful principle, bestselling author Sebastian Raschka guides you step by step as you build a GPT-style LLM that you can run on your laptop. This is an engaging book that covers each stage of the process from planning and coding to training and fine-tuning. About the book: *Build a Large Language Model From Scratch* is a practical and eminently satisfying hands-on journey into the foundations of generative AI. Without relying on any existing LLM libraries, you'll code a base model, evolve it into a text classifier, and ultimately create a chatbot that can follow your conversational instructions. And you'll really understand it because you built it yourself. What's inside: Plan and code an LLM comparable to GPT-2; Load pre-trained weights; Construct a

complete training pipeline Fine tune your LLM for text classification Develop LLMs that follow human instructions About the reader Readers need intermediate Python skills and some knowledge of machine learning The LLM you create will run on any modern laptop and can optionally utilize GPUs About the author Sebastian Raschka PhD is an LLM Research Engineer with over a decade of experience in artificial intelligence His work spans industry and academia including implementing LLM solutions as a senior engineer at Lightning AI and teaching as a statistics professor at the University of Wisconsin Madison Sebastian collaborates with Fortune 500 companies on AI solutions and serves on the Open Source Board at University of Wisconsin Madison He specializes in LLMs and the development of high performance AI systems with a deep focus on practical code driven implementations He is the author of the bestselling books Machine Learning with PyTorch and Scikit Learn and Machine Learning Q and AI The technical editor on this book was David Caswell Table of Contents 1

Understanding large language models 2 Working with text data 3 Coding attention mechanisms 4 Implementing a GPT model from scratch to generate text 5 Pretraining on unlabeled data 6 Fine tuning for classification 7 Fine tuning to follow instructions A Introduction to PyTorch B References and further reading C Exercise solutions D Adding bells and whistles to the training loop E Parameter efficient fine tuning with LoRA

**Hart's E&P. ,2008     A Framework for Real-time 3D Reconstruction by Space Carving using Graphics Hardware** Christian Nitschke,2012-03-02 Diploma Thesis from the year 2006 in the subject Communications Research Studies Enquiries grade 1 University of Weimar language English abstract Reconstruction of real world scenes from a set of multiple images is a topic in Computer Vision and 3D Computer Graphics with many interesting applications There exists a powerful algorithm for shape reconstruction from arbitrary viewpoints called Space Carving However it is computationally expensive and hence can not be used with applications in the field of 3D video or CSCW as well as interactive 3D model creation Attempts have been made to achieve real time framerates using PC cluster systems While these provide enough performance they are also expensive and less flexible Approaches that use GPU hardware acceleration on single workstations achieve interactive framerates for novel view synthesis but do not provide an explicit volumetric representation of the whole scene The proposed approach shows the efforts in developing a GPU hardware accelerated framework for obtaining the volumetric photo hull of a dynamic 3D scene as seen from multiple calibrated cameras High performance is achieved by employing a shape from silhouette technique in advance to obtain a tight initial volume for Space Carving Also several speed up techniques are presented to increase efficiency Since the entire processing is done on a single PC the framework can be applied to mobile setups enabling a wide range of further applications The approach is explained using programmable vertex and fragment processors with current hardware and compared to highly optimized CPU implementations It is shown that the new approach can outperform the latter by more than one magnitude The downloadable introduction has been written specifically for this offer Its contents are only a subset of the real introductory chapter of the thesis     International Directory of Company Histories Jay P.
