about today's major AI tools and shows how to get the best results from them. You'll learn to use AI for turning your ideas into art, writing a great email, sharpening your resume, and even sparking conversation. Instantly research everything from planning a trip to making your next big purchase. It's all a matter of picking the right AI tool and constructing the right prompt. You'll also learn to protect yourself from the risks of AI and distinguish AI fakes from the real thing. Everything you need to know is here in this book.

[Build a Text-to-Image Generator \(from Scratch\)](#) Mark Liu, 2026-01-13. This book takes you step by step through creating your own AI models that can generate images from text. You'll explore two methods of image generation: vision transformers and diffusion models, and learn vital AI development techniques as you go. Dive into the powerful models behind AI image generators. The best way to learn is to build something from scratch, and in this book, you'll build your very own diffusion model and vision transformer. As you work through each stage of development, you'll develop an understanding of how these models can be customized, applied, and integrated for impressive multimodal AI. Build a Text to Image Generator from Scratch teaches you how to build and train models to generate high-resolution images based on text descriptions, edit an existing image based on text prompts, build and train a model to add captions to images, build and train a vision transformer to classify images, fine-tune LLMs for downstream tasks such as classification, text, or image generation, better differentiate real images from deepfakes, and about the technology of AI-generated images that appear everywhere from high-end advertising to casual social media feeds. Text-to-image tools like DALL·E, Midjourney, and Flux make it easy to create AI art, but how do they work? In this book, you'll find out by building your own text-to-image generator. About the book: Build a Text to Image Generator from Scratch explores both transformer-based image generation and diffusion models. You'll work hands-on to build a pair of simple generation models that can classify images, automatically add captions, reconstruct images, and enhance existing graphics. Author Mark Liu guides you every step of the way with clear explanations, informative diagrams, and eye-opening examples you can build on your own laptop. What's inside: Build a vision transformer to classify images, edit images using text prompts, fine-tune image models. About the reader: Requires basic knowledge of generative AI models and intermediate Python skills. About the author: Mark Liu is the founding director of the Master of Science in Finance program at the University of Kentucky. He is also the author of *Learn Generative AI with PyTorch*. Table of Contents: Part 1: 1. A tale of two models: Transformers and diffusions; 2. Build a transformer; 3. Classify images with a vision transformer; 4. Add captions to images. Part 2: 5. Generate images with diffusion models; 6. Control what images to generate in diffusion models; 7. Generate high-resolution images with diffusion models. Part 3: 8. CLIP: A model to measure the similarity between image and text; 9. Text to image generation with latent diffusion; 10. A deep dive into Stable Diffusion. Part 4: 11. VQGAN: Convert images into sequences of integers; 12. A minimal implementation of DALL·E. Part 5: 13. New developments and challenges in text-to-image generation. A: Installing PyTorch and enabling GPU training locally and in Colab.

[New Technologies, Development and Application VII](#) Isak Karabegovic, Ahmed Kovačević, Sadko Mandzuka, 2024-07-27. This book features papers focusing on the

implementation of new and future technologies which were presented at the International Conference on New Technologies Development and Application Advanced Production Processes and Intelligent Systems held at the Academy of Science and Arts of Bosnia and Herzegovina in Sarajevo on 20-22 June 2024. It covers a wide range of future technologies and technical disciplines including complex systems such as Industry 4.0, robotics, mechatronics, systems automation, manufacturing, cyber physical and autonomous systems, sensors, networks, control, energy, renewable energy sources, automotive and biological systems, vehicular networking and connected vehicles and intelligent transport effectiveness and logistics systems, smart grids, nonlinear systems, power, social and economic systems, education and IoT. The book *New Technologies Development and Application VII* is oriented toward Fourth Industrial Revolution Industry 4.0, which implementation will improve many aspects of human life in all segments and lead to changes in business paradigms and production models. Further, new business methods are emerging, transforming production systems, transport, delivery and consumption, which need to be monitored and implemented by every company involved in the global market.
