The Origin of the Logic of Symbolic Mathematics Burt C. Hopkins,2011-09-07 Burt C Hopkins presents the first in depth study of the work of Edmund Husserl and Jacob Klein on the philosophical foundations of the logic of modern symbolic mathematics Accounts of the philosophical origins of formalized concepts especially mathematical concepts and the process of mathematical abstraction that generates them have been paramount to the development of phenomenology Both Husserl and Klein independently concluded that it is impossible to separate the historical origin of the thought that generates the basic concepts of mathematics from their philosophical meanings Hopkins explores how Husserl and Klein arrived at their conclusion and its philosophical implications for the modern project of formalizing all knowledge

An Introduction to Mathematics Bevan K. Youse,1974 *Annals of Mathematics* ,1895 *Husserl's Crisis of the European Sciences and Transcendental Phenomenology* Dermot Moran,2012-08-23 The Crisis of the European Sciences is Husserl s last and most influential book written in Nazi Germany where he was discriminated against as a Jew It incisively identifies the urgent moral and existential crises of the age and defends the relevance of philosophy at a time of both

scientific progress and political barbarism It is also a response to Heidegger offering Husserl's own approach to the problems of human finitude history and culture The Crisis introduces Husserl's influential notion of the life world the pre-given familiar environment that includes both nature and culture and offers the best introduction to his phenomenology as both method and philosophy Dermot Moran's rich and accessible introduction to the Crisis explains its intellectual and political context its philosophical motivations and the themes that characterize it His book will be invaluable for students and scholars of Husserl's work and of phenomenology in general
