Architecture of Computing Systems Martin Schulz, Carsten Trinitis, Nikela Papadopoulou, Thilo Pionteck, 2022-12-13 This book constitutes the proceedings of the 35th International Conference on Architecture of Computing Systems ARCS 2022 held virtually in July 2022. The 18 full papers in this volume were carefully reviewed and selected from 35 submissions. ARCS provides a platform covering newly emerging and cross-cutting topics such as autonomous and ubiquitous systems, reconfigurable computing and acceleration, neural networks and artificial intelligence. The selected papers cover a variety of topics from the ARCS core domains including energy efficiency, applied machine learning, hardware and software system security, reliable and fault-tolerant systems, and organic computing.

Parallel Computing Barbara Chapman, 2010 From Multicores and GPUs to Petascale, parallel computing technologies have brought dramatic changes to mainstream computing. The majority of today's PCs, laptops, and even notebooks incorporate multiprocessor chips with up to four processors. Standard components are increasingly combined with GPUs (Graphics Processing Unit) originally designed for high-speed graphics processing and FPGAs (Field Programmable Gate Array) to build parallel computers with a wide spectrum of high-speed processing functions. The scale of this powerful hardware is limited only by factors such as energy consumption and thermal control. However, in addition to

Introduction to Parallel Computing Roman Trobec, Boštjan Slivnik, Patricio Bulić, Borut Robič, 2018-09-27 Advancements in microprocessor architecture, interconnection technology, and software development have fueled rapid growth in parallel and distributed computing. However, this development is only of practical benefit if it is accompanied by progress in the design, analysis, and programming of parallel algorithms. This concise textbook provides in one place three mainstream parallelization approaches: OpenMP, MPI, and OpenCL for multicore computers, interconnected computers, and graphical processing units. An overview of practical parallel computing and principles will enable the reader to design efficient parallel programs for solving various computational problems on state-of-the-art personal computers and computing clusters. Topics covered range from parallel algorithms, programming tools (OpenMP, MPI, and OpenCL), followed by experimental measurements of parallel programs, run times, and by engineering analysis of obtained results for improved parallel execution performances. Many examples and exercises support the exposition.

OpenMP: Memory, Devices, and Tasks Naoya Maruyama, Bronis R. de Supinski, Mohamed Wahib, 2016-09-28 This book constitutes the proceedings of the 12th International Workshop on OpenMP (IWOMP 2016) held in Nara, Japan, in October 2016. The 24 full papers presented in this volume were carefully reviewed and selected from 28 submissions. They were organized in topical sections named applications, locality, task parallelism, extensions, tools, accelerator programming, and performance evaluations, and optimization.

Accelerator Programming Using Directives Sunita Chandrasekaran, Guido Juckeland, 2018-02-09 This book constitutes the refereed post-conference proceedings of the 4th International Workshop on Accelerator Programming Using Directives (WACCPD 2017) held in Denver, CO, USA, in November 2017. The 9 full papers presented have been carefully

reviewed and selected from 14 submissions The papers share knowledge and experiences to program emerging complex parallel computing systems They are organized in the following three sections applications environments and program evaluation

GPU Parallel Program Development Using CUDA Tolga Soyata, 2018-01-19 GPU Parallel Program Development using CUDA teaches GPU programming by showing the differences among different families of GPUs This approach prepares the reader for the next generation and future generations of GPUs The book emphasizes concepts that will remain relevant for a long time rather than concepts that are platform specific At the same time the book also provides platform dependent explanations that are as valuable as generalized GPU concepts The book consists of three separate parts it starts by explaining parallelism using CPU multi threading in Part I A few simple programs are used to demonstrate the concept of dividing a large task into multiple parallel sub tasks and mapping them to CPU threads Multiple ways of parallelizing the same task are analyzed and their pros cons are studied in terms of both core and memory operation Part II of the book introduces GPU massive parallelism The same programs are parallelized on multiple Nvidia GPU platforms and the same performance analysis is repeated Because the core and memory structures of CPUs and GPUs are different the results differ in interesting ways The end goal is to make programmers aware of all the good ideas as well as the bad ideas so readers can apply the good ideas and avoid the bad ideas in their own programs Part III of the book provides pointer for readers who want to expand their horizons It provides a brief introduction to popular CUDA libraries such as cuBLAS cuFFT NPP and Thrust the OpenCL programming language an overview of GPU programming using other programming languages and API libraries such as Python OpenCV OpenGL and Apple s Swift and Metal and the deep learning library cuDNN
