*Digital Trademarks and Brands* Rajeev Sachdev, 2025-10-28

Trademark disputes are a consistent feature of the digital legal landscape appearing in connection with a range of successive technologies and platforms. This book presents a new adapted model for digital trademarks and trade practices providing recommendations for the Uniform Domain Name Dispute Resolution Policy (UDRP) and extending a like process to platform trademark policies and complaint procedures including e commerce marketplace search advertising social media mobile applications and Metaverse platforms. The proposed model addresses and greatly reduces legal uncertainties and the harm caused by problems for digital trademarks in such key areas as the following: use and place of use of marks, bad faith and abuse, confusion, unfair acts, trade practices or competition terms, policies and disclaimers, jurisdiction, territory and justification. The adapted model is informed by pertinent theories and concepts, select aspects of EU and US and other legal frameworks and existing policies. Ultimately a uniform policy is recommended for each of the five platform types in line with an adapted version of the UDRP based on recommendations through the model. It is applied in a way that provides a comprehensive workable solution fostering legal certainty. Actual text for the proposed adapted UDRP as well as the uniform policies recommended for each type of platform is provided with guidance for implementation. The book provides recommendations that can greatly enhance the resolution of trademark disputes of various kinds and on various platforms in a more certain, cost effective and timely manner. Given that the complex global environment of digital trademarks raises new issues not adequately addressed by legal frameworks this book will be of inestimable value to digital platforms, e commerce, search advertising, social media, mobile app, Metaverse, etc, website operators, platform and website lawyers, various

stakeholders in the UDRP arbitrators panellists online dispute resolution providers libraries academics and researchers It will also be useful to digital businesses domain name holders sellers listers advertisers content providers digital consumers trademark holders digital trademark users and others    **Startup Finance 2.0** Sam Ghosh,2025-08-29 Traditional corporate financial theories and tools are based on matured companies with the assumption that the companies are going concerns Going Concern refers to the assumption that a company will continue to operate indefinitely with no intention or necessity of liquidation or cessation of operations in the foreseeable future The problem is that the Going Concern assumption does not hold for startups due to the inherent uncertainty associated with startups Traditional financial education and resources usually meant for analysts and accountants aren't ideal for entrepreneurs They focus on analyzing past data from established businesses not on making forward looking decisions in the uncertain and highly dynamic environment of startups Entrepreneurs also often struggle to prioritize the allocation of resources between seemingly urgent matters and matters that are important for the long term value of the startup Thus this book takes a value oriented approach to startup finance The book is designed to build the financial intuition that an entrepreneur needs to prioritize matters vital for the long term value of the company raise capital and allocate capital for value maximization It also looks at finance from a value creation point of view and covers specific methods especially suited for startups from investment assessment to valuation to fundraising to managing day to day finances

**Cognitive Warfare** Adam Henschke,2024-08-13 This book explores the conceptual historical and ethical issues of information conflict to present a detailed analysis of cognitive warfare Is it possible for liberal democracies to deliberately use information on civilian populations to impact political and social institutions While information conflict has been a part of political conflict warfare and international relations for as long as there has been political competition given that our modern political and social lives are saturated by information we are now faced with a pressing set of reasons to understand cognitive warfare and to place it in a wider historical and technological context This book identifies a series of conceptual and ethical challenges facing liberal democracies around modern information conflict Drawing from historical practices it suggests that two values human dignity and political autonomy can explain why some acts of cognitive warfare might be judged to be good while other acts are judged to be bad This book will be of much interest to students and researchers of intelligence studies ethics security studies and International Relations Chapters 7 and 9 of this book are freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons

#### *Improving Modern Code Review Leveraging Contextual and Structural Information from Source Code*

Ohiduzzaman Shuvo, 2023. Review comments are a major building block of modern code reviews. Ensuring the quality of code review comments is essential but manually writing high quality review comments is technically challenging and time consuming. Over the years there have been numerous attempts to automatically assess and recommend code review comments but they could be limited in several aspects. First, according to existing evidence, various development practices including code reviews could be drastically different between open and closed source systems. However, only a little research has been done to better understand how existing techniques might perform differently when assessing the code reviews from open and closed source systems. Second, existing techniques that recommend or generate code review comments often suffer from a lack of scalability e.g. requirements of specialized hardware by Deep Learning models and generalizability e.g. use of only one programming language. In this thesis we a) conduct an empirical study to better understand the challenges of existing techniques for code review assessment and b) propose a novel scalable technique for review comment recommendation. First we empirically investigate how existing techniques perform in assessing code reviews from open

source and closed source systems We find that the performance of existing techniques significantly differs when assessing code reviews from these two types of systems Our findings also suggest that less experienced developers submit more non useful review comments to both systems which warrants for automated support in writing code reviews Second to help developers write better review comments we propose a novel technique RevCom that recommends relevant review comments by leveraging various code level changes with structured information retrieval Our technique outperforms both IR based and DL based baselines while being lightweight scalable and has the potential to reduce the cognitive effort and time of the reviewers
