**Fundamentals of Engineering Thermodynamics** Michael J. Moran, Howard N. Shapiro, Daisie D. Boettner, Margaret B. Bailey, 2010-12-07 This leading text in the field maintains its engaging readable style while presenting a broader range of applications that motivate engineers to learn the core thermodynamics concepts. Two new coauthors help update the material and integrate engaging new problems. Throughout the chapters they focus on the relevance of thermodynamics to modern engineering problems. Many relevant engineering based situations are also presented to help engineers model and solve these problems

**Subject Guide to Books in Print**, 1997    **Books in Print Supplement**, 1994    **Labs on Chip**

Eugenio Iannone, 2018-09-03 **Labs on Chip Principles Design and Technology** provides a complete reference for the complex field of labs on chip in biotechnology. Merging three main areas fluid dynamics, monolithic micro and nanotechnology and out of equilibrium biochemistry, this text integrates coverage of technology issues with strong theoretical explanations of design techniques. Analyzing each subject from basic principles to relevant applications, this book describes the biochemical elements required to work on labs on chip. Discusses fabrication, microfluidic and electronic and optical detection techniques. Addresses planar technologies, polymer microfabrication and process scalability to huge volumes. Presents a global view of current lab on chip research and development. Devotes an entire chapter to labs on chip for genetics. Summarizing in one source the different technical competencies required, **Labs on Chip Principles Design and Technology** offers valuable guidance for the lab on chip design decision making process while exploring essential elements of labs on chip, useful both to the professional who wants to approach a new field and to the specialist who wants to gain a broader perspective.
