- Does tetrachloroethylene ($\text{Cl}_2\text{C}=\text{CCl}_2$) have an overall dipole moment? Why?
- Sulfur dioxide has a dipole moment, while carbon dioxide does not. What do these observations indicate about the geometries of these molecules?
- For each pair of molecules, which has a larger dipole moment? Why?

- Build bicarbonate ion (HCO_3^-) and carbonate ion (CO_3^{2-}). To build the anionic forms, delete the free undesired valence(s) (*i.e.*, the yellow virtual bonds) using the **Delete** tool from the tool bar, and, in the **Calculations** dialog indicate that the structure is the anion or dianion (as appropriate). Perform Hartree-Fock 3-21G Equilibrium Geometry calculations.
 - Click on each atom in the ions, and construct a table that contains the charges present on the atom. (The charges are listed in the **Properties** dialog.)
 - Do the charges you observe match what you expect from the Lewis dot structure for the corresponding structure? Why? What did you see that does not match the predicted formal charges?
 - Measure the C-O bond lengths for carbonate. Do the relative bond lengths match what you predict from resonance theory? Why? (In other words, what did you predict, and if the value were different, what caused the difference?)
 - Measure the C-O bond lengths for bicarbonate. Do the relative bond lengths match what you predict from resonance theory? Why? (In other words, what did you predict, and if the value were different, what caused the difference?)
- Draw condensed and bond-line formulas for all possible isomers of C_5H_{12} .
- Indicate whether the molecules in each pair are isomers or the same molecule.

Organic Chem 348 Problem Sets:

Spectroscopic Methods in Organic Chemistry Ian Fleming, Dudley Williams, 2020-01-17 This book is a well established guide to the interpretation of the mass ultraviolet infrared and nuclear magnetic resonance spectra of organic compounds It is designed for students of organic chemistry taking a course in the application of these techniques to structure determination The text also remains useful as a source of data for organic chemists to keep on their desks throughout their career In the seventh edition substantial portions of the text have been revised reflecting knowledge gained during the author s teaching experience over the last seven years The chapter on NMR has been divided into two separate chapters covering the 1D and 2D experiments The discussion is also expanded to include accounts of the physics at a relatively simple level following the development of the magnetization vectors as each pulse sequence is introduced The emphasis on the uses of NMR spectroscopy in structure determination is retained Worked examples and problem sets are included on a chapter level to allow students to practise their skills by determining the chemical structures of unknown compounds

[Linking Optical and Chemical Properties of Dissolved Organic Matter in Natural Waters](#) Christopher L. Osburn, Thomas S. Bianchi, 2017-01-17 A substantial increase in the number of studies using the optical properties absorbance and fluorescence of dissolved organic matter DOM as a proxy for its chemical properties in estuaries and the coastal and open ocean has occurred during the last decade We are making progress on finding the actual chemical compounds or phenomena responsible for DOM s optical properties Ultrahigh resolution mass spectrometry in particular has made important progress in making the key connections between optics and chemistry But serious questions remain and the last major special issue on DOM optics and chemistry occurred

nearly 10 years ago Controversies remain from the non specific optical properties of DOM that are not linked to discrete sources and sometimes provide conflicting information The use of optics which is relatively easier to employ in synoptic and high resolution sampling to determine chemistry is a critical connection to make and can lead to major advances in our understanding of organic matter cycling in all aquatic ecosystems The contentions and controversies raised by our poor understanding of the linkages between optics and chemistry of DOM are bottlenecks that need to be addressed and overcome
