

CALCULATE FALL CLEARANCE LIKE A PRO

It is vitally important that fall clearance is properly calculated before working at height. Because, guessing is for rookies.

CALCULATION

When tying off overhead with a shock absorbing lanyard, the required fall clearance distance (FC) is $= A + B + C + D$.

Lanyard length
(Example = 6 feet)

Maximum deceleration distance of the lanyard
(3.5 feet is the OSHA requirement)

Height of the suspend worker
(Typically = 6', factoring in D-ring slide and harness stretch)

Safety factor (3 feet is the industry standard)

To be safe the distance between your anchor point and the nearest obstruction must be $> FC$

Nearest obstruction.

This poster illustrates a common method of calculating fall clearance using an energy absorbing lanyard. Fall clearance required varies by the type of connecting device and its performance specifications. Refer to the manufacturer's instructions for complete details for calculating fall clearance to ensure maximum safety on the jobsite.

Lane, Monica Carson, Conni Bergmann, Tony Wyss-Coray, 2007-12-24 Up until approximately 20 years ago the idea that the central nervous system CNS and components of the immune system were dynamically interactive was considered impossible or at least highly unlikely as the CNS was judged an immunosuppressive environment based upon experimental evidence highlighting the survival of tissue grafts within the brain Additional evidence supporting this viewpoint included i the presence of the blood brain barrier BBB which provides a physical and physiological obstruction that is difficult for cells and mac molecules to cross ii the relative absence of MHC class I and II expression on CNS cells like astrocytes and neurons and iii lack of abundant antigen presenting cells APC which are required for the generation of an adaptive immune response However in spite of these obstacles it is now well accepted that the CNS is routinely subject to immune surveillance under both normal as well as diseased conditions Indeed activated cells of the immune system such as T and B lymphocytes and monocyte macrophages readily infiltrate and accumulate within the CNS following microbial infection injury or upon development of autoimmune responses directed toward resident antigens of the CNS
