Multidisciplinary Approach to Information Technology in Library and Information Science Holland, Barbara, Sinha, Keshav, 2024-02-14 In the ever evolving landscape of information technology within library and information science scholars often find themselves navigating a complex web of diverse research areas The broad spectrum of topics ranging from digital

libraries to artificial intelligence poses a significant challenge for academic scholars seeking a comprehensive understanding of the field's intricacies. The absence of a consolidated resource tailored to the specific needs of graduate students, professors, and practitioners further exacerbates this issue. *Multidisciplinary Approach to Information Technology in Library and Information Science* addresses the pressing challenges faced by scholars in the realm of library and information science. This reference handbook serves as a beacon illuminating the multifaceted interactions and impacts of technologies on information resources. This book delves into the ethical, legal, and social implications of information technology across diverse contexts: libraries, information centers, archives, museums, education, business, government, and healthcare.

Computational Logistics Joachim R. Daduna, Gernot Liedtke, Xiaoning Shi, Stefan Voß, 2023-09-06. The 32 full papers presented in this volume were carefully reviewed and selected from 71 submissions. They are grouped into the following topics: computational logistics, maritime shipping, vehicle routing, traffic and transport, and combinatorial optimization.

Future of Management: Embracing Sustainability, Diversity, and Inclusivity Koustubh Kanti Ray, Bhuwandeep, 2024-11-15. In response to unparalleled challenges and opportunities, the scope of management is undergoing a profound transformation. Organisations must adapt and innovate in order to flourish in an era characterised by rapid technological advancements, climate change, shifting demographics, and evolving social norms. The three pillars of modern management—sustainability, diversity, and inclusivity—reflect a comprehensive approach that prioritises the well-being of people and the planet over short-term profits and reflects a commitment to social responsibility. In the current era of management, sustainability has emerged as a critical issue. Organisations must incorporate ethical considerations into their decision-making processes, reduce their carbon footprints, and implement eco-conscious practices as the effects of climate change become more severe. According to Paul Polman, the former CEO of Unilever, "Sustainability is not a charity; it is a business case."

The Guide to Electric, Hybrid & Fuel-Efficient Cars Jacques Duval, Daniel Breton, 2016-06-28. Passionate about sustainable development, introducing the world's first guide to electric cars. In the first edition of what promises to be the new bestseller in the world of cars, our authors explain the latest on electric vehicles. Speaking to amateurs and more seasoned enthusiasts alike, our two experts answer all your questions: how do you recharge and service an electric vehicle? Are electric cars built for North American winters? Can you even drive on electricity every day of the week? Do you really save money when you go electric? Do electric vehicles have the speed you need? Would a hydrogen car be a wiser choice? Are the batteries in electric cars harmful to the environment? Are they dangerous like the oil companies say? Does the government chip in when you buy an electric vehicle? Jacques Duval and Daniel Breton have tested over 70 different models that are on the market now or will be in a matter of months. They get down to the nitty-gritty with in-depth commentary from page one. Learn all there is to know about tech features, pricing, energy consumption stats, greenhouse gas emissions, and pollutants. Just

fifteen years ago electric cars were a novelty now they're becoming increasingly central to the automobile industry. Soon the entire world will turn to this eco friendly mode of transportation **The Electric Vehicle** Gijs Mom, 2013-02-15 Winner of the Engineer Historian Award from the International History and Heritage Committee of the American Society of Mechanical Engineers and the Nicholas Joseph Cugnot Award given by the Society of Automotive Historians. Recent attention to hybrid cars that run on both gasoline and electric batteries has made the electric car an apparent alternative to the internal combustion engine and its attendant environmental costs and geopolitical implications. Few people realize that the electric car, neither a recent invention nor a historical curiosity, has a story as old as that of the gasoline powered automobile and that at one time many in the nascent automobile industry believed battery powered engines would become the dominant technology. In both Europe and America electric cars and trucks succeeded in meeting the needs of a wide range of consumers. Before World War II as many as 30 000 electric cars and more than 10 000 electric trucks plied American roads. European cities were busy with electrically propelled fire engines, taxis, delivery vans, buses, heavy trucks, and private cars. Even so, throughout the century long history of electric propulsion, the widespread conviction it was an inferior technology remained stubbornly in place, an assumption mirrored in popular and scholarly memory. In *The Electric Vehicle* Gijs Mom challenges this view, arguing that at the beginning of the automobile age neither the internal combustion engine nor the battery powered vehicle enjoyed a clear advantage. He explores the technology and marketing consumer ratio faction relationship over four generations of electric vehicle design with separate chapters on privately owned passenger cars and commercial vehicles. Mom makes comparisons among European countries and between Europe and America. He finds that the electric vehicle offered many advantages among them greater reliability and control, less noise and pollution. He also argues that a nexus of factors cultural, underpowered and less rugged electric cars seemed feminine at a time when most car buyers were men. Structurally, the shortcomings of battery technology at the time and systemic the infrastructural problems of changing large numbers of batteries ultimately gave an edge to the internal combustion engine. One hopes as a new generation of electric vehicles becomes a reality *The Electric Vehicle* offers a long overdue reassessment of the place of this technology in the history of street transportation. **Electric and Hybrid Vehicles** Gianfranco Pistoia, 2010-07-27 Electric and Hybrid Vehicles: Power Sources, Models, Sustainability, Infrastructure and the Market reviews the performance, cost, safety and sustainability of battery systems for hybrid electric vehicles (HEVs) and electric vehicles (EVs) including nickel metal hydride batteries and Li ion batteries. Throughout this book, especially in the first chapters, alternative vehicles with different power trains are compared in terms of lifetime cost, fuel consumption and environmental impact. The emissions of greenhouse gases are particularly dealt with. The improvement of the battery or fuel cell performance and governmental incentives will play a fundamental role in determining how far and how substantial alternative vehicles will penetrate into the market. An adequate recharging infrastructure is of paramount importance for the diffusion of vehicles powered by batteries and fuel.

cells as it may contribute to overcome the so called range anxiety Thus proposed battery charging techniques are summarized and hydrogen refueling stations are described The final chapter reviews the state of the art of the current models of hybrid and electric vehicles along with the powertrain solutions adopted by the major automakers Contributions from the worlds leading industry and research experts Executive summaries of specific case studies Information on basic research and application approaches

A Review of Electric Vehicle Technology ,1966

Overcoming Barriers to

Electric-vehicle Deployment Division on Engineering and Physical Sciences,2013 Annotation The electric vehicle offers many promises increasing U S energy security by reducing petroleum dependence contributing to climate change initiatives by decreasing greenhouse gas GHG emissions stimulating long term economic growth through the development of new technologies and industries and improving public health by improving local air quality There are however substantial technical social and economic barriers to widespread adoption of electric vehicles including vehicle cost small driving range long charging times and the need for a charging infrastructure In addition people are unfamiliar with electric vehicles are uncertain about their costs and benefits and have diverse needs that current electric vehicles might not meet Although a person might derive some personal benefits from ownership the costs of achieving the social benefits such as reduced GHG emissions are borne largely by the people who purchase the vehicles Given the recognized barriers to electric vehicle adoption Congress asked the Department of Energy DOE to commission a study by the National Academies to address market barriers that are slowing the purchase of electric vehicles and hindering the deployment of supporting infrastructure As a result of the request the National Research Council NRC a part of the National Academies appointed the Committee on Overcoming Barriers to Electric Vehicle Deployment This committee documented their findings in two reports a short interim report focused on near term options and a final comprehensive report Overcoming Barriers to Electric Vehicle Deployment fulfills the request for the short interim report that addresses specifically the following issues infrastructure needs for electric vehicles barriers to deploying the infrastructure and possible roles of the federal government in overcoming the barriers This report also includes an initial discussion of the pros and cons of the possible roles This interim report does not address the committee s full statement of task and does not offer any recommendations because the committee is still in its early stages of data gathering The committee will continue to gather and review information and conduct analyses through late spring 2014 and will issue its final report in late summer 2014 Overcoming Barriers to Electric Vehicle Deployment focuses on the light duty vehicle sector in the United States and restricts its discussion of electric vehicles to plug in electric vehicles PEVs which include battery electric vehicles BEVs and plug in hybrid electric vehicles PHEVs The common feature of these vehicles is that their batteries are charged by being plugged into the electric grid BEVs differ from PHEVs because they operate solely on electricity stored in a battery that is there is no other power source PHEVs have internal combustion engines that can supplement the electric power train Although this report considers PEVs generally the committee

recognizes that there are fundamental differences between PHEVs and BEVs
