million U S service members took part in the wars in Afghanistan and Iraq Shortly after troops started returning from their  
deployments some active duty service members and veterans began experiencing mental health problems Given the stressors  
associated with war it is not surprising that some service members developed such mental health conditions as posttraumatic  
stress disorder depression and substance use disorder Subsequent epidemiologic studies conducted on military and veteran  
populations that served in the operations in Afghanistan and Iraq provided scientific evidence that those who fought were in  
fact being diagnosed with mental illnesses and experiencing mental health related outcomes in particular suicide at a higher  
rate than the general population This report provides a comprehensive assessment of the quality capacity and access to  
mental health care services for veterans who served in the Armed Forces in Operation Enduring Freedom Operation Iraqi
