Network Flow Analysis:

Network Flow Analysis Michael W. Lucas, 2010-06-01 You know that servers have log files and performance measuring tools and that traditional network devices have LEDs that blink when a port does something You may have tools that tell you how busy an interface is but mostly a network device is a black box Network Flow Analysis opens that black box demonstrating how to use industry standard software and your existing hardware to assess analyze and debug your network Unlike packet sniffers that require you to reproduce network problems in order to analyze them flow analysis lets you turn back time as you analyze your network You ll learn how to use open source software to build a flow based network awareness system and how to use network analysis and auditing to address problems and improve network reliability You ll also learn how to use a flow analysis system collect flow records view filter and report flows present flow records graphically and use flow records to proactively improve your network Network Flow Analysis will show you how to Identify network server router and firewall problems before they become critical Find defective and misconfigured software Quickly find virus spewing machines even if they re on a different continent Determine whether your problem stems from the network or a server Automatically graph the most useful data And much more Stop asking your users to reproduce problems Network Flow Analysis gives you the tools and real world examples you need to effectively analyze your network flow data Now you can determine what the network problem is long before your customers report it and you can make that silly phone stop ringing
