Networking Infrastructure For Pervasive Computing Enabling Technologies And Systems:

Networking Infrastructure for Pervasive Computing Debashis Saha, Amitava Mukherjee, Somprakash Bandyopadhyay, 2011-06-28 Networking Infrastructure for Pervasive Computing Enabling Technologies Systems is a comprehensive guide to tomorrow's world of ubiquitous computing where users can access and manipulate information from everywhere at all times. The emphasis is on networking systems and standards rather than detailed physical implementation. Addressed are many technical obstacles such as connectivity levels of service performance and reliability and fairness. The authors also describe the existing enabling off the shelf technologies and its underlying infrastructure known as pervasive networking. PervNet PervNet ties different sets of smart nodes together enabling them to communicate with each other to provide pervasive computing services to users. Throughout the book important issues related to scalability transparency security energy management QoS provisioning fault tolerance and disconnected operations are discussed. This work provides a research and development perspective to the field of PervNet and will serve as an essential reference for network designers operators and developers.

Networking Infrastructure for Pervasive Computing Debashis Saha, Amitava Mukherjee, Somprakash Bandyopadhyay, 2003 The authors two of whom are from the Indian Institute of Management Calcutta India argue that the possibilities of Pervasive Computing promises to extend the information networked environment to practically every technological device but that the current networking and communication infrastructure doesn't support those possibilities. Largely concerning themselves with networking technologies they provide advice on the problems of addressing this gap between promise and infrastructure. Pervasive Information Systems Panos E Kourouthanassis, George M Giaglis, 2016-09-16 Today's ubiquitous computing technology is imbedded in everyday objects from cars to clothes to shipping containers whose location context and state can be monitored instantly processed and acted upon. This new volume in the Advances in Management Information Systems series provides an in depth review of the state of the art practices and research opportunities in a new era where information technology resides in physical space. Written for both scholars and practitioners Pervasive Information Systems is organized into three sections each investigating a distinct part of the subject. Part I focuses on the design challenges of Pervasive Information Systems PS and discusses issues relating to the coordination of PS through middleware structures as well as issues related to the efficient deployment of PS. Part II discusses the challenges and limitations of deploying pervasive technologies to support domestic corporate and public systems. Part III presents two emerging research fields of PS design for aesthetics and PS evaluation.
