Neural Network Applications In Control Neural Network Applications In Control:

Neural Network Applications in Control George William Irwin, K. Warwick, Kenneth J. Hunt, 1995 The aim is to present an introduction to and an overview of the present state of neural network research and development with an emphasis on control systems application studies The book is useful to a range of levels of reader The earlier chapters introduce the more popular networks and the fundamental control principles these are followed by a series of application studies most of which are industrially based and the book concludes with a consideration of some recent research *Applications Of Neural Adaptive Control Technology* Andrzej Dzieliński, Jens Kalkkuhl, Rafal Zbikowski, Kenneth J Hunt, 1997-09-02 This book presents the results of the second workshop on Neural Adaptive Control Technology NACT II held on September 9 10 1996 in Berlin The workshop was organised in connection with a three year European Union funded Basic Research Project in the ESPRIT framework called NACT a collaboration between Daimler Benz Germany and the University of Glasgow Scotland The NACT project which began on 1 April 1994 is a study of the fundamental properties of neural network based adaptive control systems Where possible links with traditional adaptive control systems are exploited A major aim is to develop a systematic engineering procedure for designing neural controllers for nonlinear dynamic systems The techniques developed are being evaluated on concrete industrial problems from within the Daimler Benz group of companies The aim of the workshop was to bring together selected invited specialists in the fields of adaptive control nonlinear systems and neural networks The first workshop NACT I took place in Glasgow in May 1995 and was mainly devoted to theoretical issues of neural adaptive control Besides monitoring further development of theory the NACT II workshop was focused on industrial applications and software tools This context dictated the focus of the book and guided the editors in the choice of the papers and their subsequent reshaping into substantive book chapters Thus with the project having progressed into its applications stage emphasis is put on the transfer of theory of neural adaptive engineering into industrial practice The contributors are therefore both renowned academics and practitioners from major industrial users of neurocontrol *Application of Neural Networks to Adaptive Control of Nonlinear Systems* Gee Wah Ng, 1997 This book investigates the ability of a neural network NN to learn how to control an unknown nonlinear in general system using data acquired on line that is during the process of attempting to exert control Two algorithms are developed to train the neural network for real time control applications The first algorithm is known as Learning by Recursive Least Squares LRLS algorithm and the second algorithm is known as Integrated Gradient and Least Squares IGLS algorithm The ability of these algorithms to train the NN controller for real time control is demonstrated on practical applications and the local convergence and stability requirements of these algorithms are analysed In addition network topology learning algorithms particularly supervised learning and neural network control strategies are presented *Adaptive Control with Recurrent High-order Neural Networks* George A. Rovithakis, Manolis A. Christodoulou, 2012-12-06 The series Advances in Industrial Control aims to report and encourage technology transfer in

control engineering The rapid development of control technology has an impact on all areas of the control discipline New theory new controllers actuators sensors new industrial processes computer methods new applications new philosophies new challenges Much of this development work resides in industrial reports feasibility study papers and the reports of advanced collaborative projects The series offers an opportunity for researchers to present an extended exposition of such new work in all aspects of industrial control for wider and rapid dissemination Neural networks is one of those areas where an initial burst of enthusiasm and optimism leads to an explosion of papers in the journals and many presentations at conferences but it is only in the last decade that significant theoretical work on stability convergence and robustness for the use of neural networks in control systems has been tackled George Rovithakis and Manolis Christodoulou have been interested in these theoretical problems and in the practical aspects of neural network applications to industrial problems This very welcome addition to the Advances in Industrial Control series provides a succinct report of their research The neural network model at the core of their work is the Recurrent High Order Neural Network RHONN and a complete theoretical and simulation development is presented Different readers will find different aspects of the development of interest The last chapter of the monograph discusses the problem of manufacturing or production process scheduling

Ge, C.C. Hang, T.H. Lee, Tao Zhang, 2013-03-09 Recent years have seen a rapid development of neural network control techniques and their successful applications. Numerous simulation studies and actual industrial implementations show that artificial neural network is a good candidate for function approximation and control system design in solving the control problems of complex nonlinear systems in the presence of different kinds of uncertainties. Many control approaches, methods reporting inventions and control applications within the fields of adaptive control, neural control and fuzzy systems have been published in various books, journals and conference proceedings. In spite of these remarkable advances in neural control field due to the complexity of nonlinear systems, the present research on adaptive neural control is still focused on the development of fundamental methodologies. From a theoretical viewpoint, there is in general a lack of a firmly mathematical basis in stability, robustness and performance analysis of neural network adaptive control systems. This book is motivated by the need for systematic design approaches for stable adaptive control using approximation based techniques. The main objectives of the book are to develop stable adaptive neural control strategies and to perform transient performance analysis of the resulted neural control systems analytically. Other linear in the parameter function approximators can replace the linear in the parameter neural networks in the controllers presented in the book without any difficulty, which include polynomials, splines, fuzzy systems, wavelet networks among others. Stability is one of the most important issues being concerned if an adaptive neural network controller is to be used in practical applications. Neural Networks for Identification, Prediction and Control Duc T. Pham, Xing Liu, 2012-12-06 In recent years there has been a growing interest in applying neural networks to dynamic systems identification, modelling, prediction and control. Neural networks are computing systems characterised by the ability to learn from examples rather than having to be programmed in a conventional sense. Their use enables the behaviour of complex systems to be modelled and predicted and accurate control to be achieved through training without a priori information about the systems structures or parameters. This book describes examples of applications of neural networks. In modelling, prediction and control. The topics covered include identification of general linear and non-linear processes, forecasting of river levels, stock market prices and currency exchange rates and control of a time delayed plant and a two joint robot. These applications employ the major types of neural networks and learning algorithms. The neural network types considered in detail are the multilayer perceptron, MLP, the Elman and Jordan networks and the Group Method of Data Handling (GMDH) network. In addition, cerebellar model articulation controller (CMAC) networks and neuromorphic fuzzy logic systems are also presented. The main learning algorithm adopted in the applications is the standard backpropagation (BP) algorithm. Widrow-Hoff learning, dynamic BP and evolutionary learning are also described. **Application of Neural Networks and Other Learning Technologies in Process Engineering** I. M. Mujtaba, Mohamed Azlan Hussain, 2001 This book is a follow up to the IChemE symposium on Neural Networks and Other Learning Technologies held at Imperial College UK in May 1999. The interest shown by the participants, especially those from the industry, has been instrumental in

producing the book The papers have been written by contributors of the symposium and experts in this field from around the world They present all the important aspects of neural network utilisation as well as show the versatility of neural networks in various aspects of process engineering problems modelling estimation control optimisation and industrial applications

Applications of Neural Networks to Adaptive Control Russell W Scott (II.),NAVAL POSTGRADUATE SCHOOL MONTEREY CA.,1989 The amount of a priori knowledge required to design some modern control systems is becoming prohibitive Two current methods addressing this problem are robust control in which the control design is insensitive to errors in system knowledge and adaptive control in which the control law is adjusted in response to a continually updated model of the system This thesis examines the application of parallel distributed processing neural networks to the problem of adaptive control The structure of neural networks is introduced focusing on the Backpropagation paradigm A general form of controller consistent with use in neural networks is developed and combined with a discussion of linear least squares parameter estimation techniques to suggest a structure for neural network adaptive controllers This neural network adaptive control structure is then applied to a number of estimation and control problems using as a model the longitudinal motion of the A 4 aircraft The purpose of this thesis is to develop and demonstrate a neural network adaptive control structure consistent with adaptive control theory Theses RH Application of Neural Networks to Modelling and Control G.
