This book is intended for IBM technical professionals, Business Partners and customers responsible for the planning deployment and maintenance of the IBM System Storage DS5000 Series family of products. First we provide a conceptual framework for understanding the hardware in a Storage Area Network. Then we offer our guidelines, hints and tips for the physical installation, cabling and zoning using the Storage Manager setup tasks. Next we provide a quick guide to help you install and configure the DS5000 using best practices. After that we turn our attention to the performance and tuning of various components and features including numerous guidelines. We look at performance implications for various application products such as IBM DB2, Oracle, IBM Tivoli Storage Manager, Microsoft SQL server and in particular Microsoft Exchange server. Then we review the various tools available to simulate workloads and to measure, collect and analyze performance data. We also consider the IBM AIX environment including IBM High Availability Cluster Multiprocessing (HACMP™) and IBM

General Parallel File System GPFS™ This edition of the book also includes guidelines for managing and using the DS5000 with the IBM System Storage SAN Volume Controller SVC and IBM Storwize V7000
