## **Neural Network Design Electrical Engineering:**

**Neural Network Design (2nd Edition)** Martin Hagan, Howard Demuth, Mark Beale, Orlando De Jesus, 2014-09-01 This book provides a clear and detailed coverage of fundamental neural network architectures and learning rules. In it, the authors emphasize a coherent presentation of the principal neural networks methods for training them and their applications to practical problems.

**Artificial Intelligence in Theory and Practice II** Max Bramer, 2010-08-17 The papers in this volume comprise the refereed proceedings of the conference Artificial Intelligence in Theory and Practice IFIP AI 2008 which formed part of the 20th World Computer Congress of IFIP the International Federation for Information Processing WCC 2008 in Milan Italy in September 2008. The conference is organised by the IFIP Technical Committee on Artificial Intelligence Technical Committee 12 and its Working Group 12.5 Artificial Intelligence Applications. All papers were reviewed by at least two members of our Program Committee. Final decisions were made by the Executive Program Committee which comprised John Debenham University of Technology Sydney Australia, Ilias Maglogiannis University of Aegean Samos Greece, Eunika Mercier Laurent KIM France and myself. The best papers were selected for the conference either as long papers maximum 10 pages or as short papers maximum 5 pages and are included in this volume. The international nature of IFIP is amply reflected in the large number of countries represented here. The conference also featured invited talks by Prof Nikola Kasabov Auckland University of Technology New Zealand and Prof Lorenza Saitta University of Piemonte Orientale Italy. I should like to thank the conference chair John Debenham for all his efforts and the members of our program committee for reviewing papers to a very tight deadline.

**Analog VLSI Neural Networks** Yoshiyasu Takefuji, 2012-12-06 This book brings together in one place important contributions and state of the art research in the rapidly advancing area of analog VLSI neural networks. The book serves as an excellent reference providing insights into some of the most important issues in analog VLSI neural networks research efforts.

**Artificial Neural Nets and Genetic Algorithms** David W. Pearson, Nigel C. Steele, Rudolf F. Albrecht, 2012-12-06 Artificial neural networks and genetic algorithms both are areas of research which have their origins in mathematical models constructed in order to gain understanding of important natural processes. By focussing on the process models rather than the processes themselves, significant new computational techniques have evolved which have found application in a large number of diverse fields. This diversity is reflected in the topics which are subjects of the contributions to this volume. There are contributions reporting successful applications of the technology to the solution of industrial commercial problems. This may well reflect the maturity of the technology, notably in the sense that real users of modelling prediction techniques are prepared to accept neural networks as a valid paradigm. Theoretical issues also receive attention, notably in connection with the radial basis function neural network. Contributions in the field of genetic algorithms reflect the wide range of current applications including, for example, portfolio selection, filter design, frequency assignment, tuning of nonlinear PID controllers. These techniques are also used extensively for combinatorial optimisation.
