Nonimaging Optics Roland Winston, Lun Jiang, Vladimir Olier, 2020-10-07 This book provides a comprehensive look at the

science methods designs and limitations of nonimaging optics It begins with an in depth discussion on thermodynamically efficient optical designs and how they improve the performance and cost effectiveness of solar concentrating and illumination systems It then moves into limits to concentration imaging devices and their limitations and the theory of furnaces and its applications to optical design Numerous design methods are discussed in detail followed by chapters of estimating the performance of a nonimaging design and pushing their limits of concentration Exercises and worked examples are included throughout

Entropy and Information Optics Francis T.S. Yu, 2017-11-28 This book shows there is a profound connection between information and entropy Without this connection information would be more difficult to apply to science This book covers the connection and the application to modern optics and radar imaging It shows that there exists a profound relationship between Einstein's relativity theory and Schrödinger's quantum mechanics by means of the uncertainty principle In due of the uncertainty relation this book shows that every bit of information takes time and energy to transfer to create and to observe The new edition contains 3 new chapters on radar imaging with optics science in the myth of information and time and the enigma of space
