Notes on Set Theory Yiannis Moschovakis, 2006-06-15 The axiomatic theory of sets is a vibrant part of pure mathematics with its own basic notions fundamental results and deep open problems At the same time it is often viewed as a foundation of mathematics so that in the most prevalent current mathematical practice to make a notion precise simply means to define it in set theory This book tries to do justice to both aspects it gives a solid introduction to pure set theory through transfinite recursion and the construction of the cumulative hierarchy of sets and also attempts to explain how mathematical objects can be faithfully modeled within the universe of sets In this new edition the author has added solutions to the exercises and rearranged and reworked the text to improve the presentation The book is geared to advanced undergraduate or beginning graduate mathematics students and mathematically minded graduate students in computer science and philosophy

Truth in Mathematics Harold G. Dales, Gianluigi Oliveri, 1998 The nature of truth in mathematics is a problem which has exercised the minds of thinkers from at least the time of the ancient Greeks The great advances in mathematics and philosophy in the twentieth century and in particular the proof of Gödel's theorem and the development of the notion of independence in mathematics have led to new viewpoints on this question in our era This book is the result of the interaction of a number of outstanding mathematicians and philosophers including Yuri Manin Vaughan Jones and Per Martin L and their discussions of this problem It provides an overview of the forefront of current thinking and is a valuable introduction and reference for researchers in the area

Foundations of Mathematics Andrés Eduardo Caicedo, James Cummings, Peter Koellner, Paul B. Larson, 2017-05-12 This volume contains the proceedings of the Logic at Harvard conference in honor of W Hugh Woodin's 60th birthday held March 27-29 2015 at Harvard University It presents a collection of papers related to the work of Woodin who has been one of the leading figures in set theory since the early 1980s The topics cover many of the areas central to Woodin's work including large cardinals determinacy descriptive set theory and the continuum problem as well as connections between set theory and Banach spaces recursion theory and philosophy each reflecting a period of Woodin's career Other topics covered are forcing axioms inner model theory the partition calculus and the theory of ultrafilters This volume should make a suitable introduction to Woodin's work and the concerns which motivate it The papers should be of interest to graduate students and researchers in both mathematics and philosophy of mathematics particularly in set theory foundations and related areas

Intermediate Set Theory F. R. Drake, D. Singh, 1996-09-11 The authors cover first order logic and the main topics of set theory in a clear mathematical style with sensible philosophical discussion The emphasis is on presenting the use of set theory in various areas of mathematics with particular attention paid to introducing axiomatic set theory showing how the axioms are needed in mathematical practice and how they arise Other areas introduced include the axiom of choice filters and ideals Exercises are provided which are suitable for both beginning students and degree level students

Fundamentals of Mathematical Logic Peter G. Hinman, 2018-10-08 This introductory graduate text covers modern mathematical logic from propositional first order and infinitary logic and Gödel's Incompleteness Theorems to extensive introductions to set theory model theory and recursion computability theory Based on the author's more than 35 years of teaching experience the book develops students intuition by presenting complex ideas in the simplest context for which they make sense The book is appropriate for use as a classroom text for self study and as a
