**Aluminium Alloys 2006** Warren J. Poole, M. A. Wells, David J. Lloyd, 2006 The world production of primary and recycled aluminum continues to increase and over the past twenty years has risen from 15 Mt y in 1985 to 32 Mt y in 2005. The main consumers are transportation, beverage, and other packaging and building construction. The global primary aluminum production has been growing by about 2-3% per year. However, growth rates over the last decade have been much higher. In particular, during the past five years, China has played a critical role in aluminum production and has gone through a dramatic period of growth.

**Electronic Structure of Organic Semiconductors** Luís Alcácer, 2018-12-07 Written in the perspective of an experimental chemist, this book puts together some fundamentals from chemistry, solid state physics, and quantum chemistry to help with understanding and predicting the electronic and optical properties of organic semiconductors, both polymers and small molecules. The text is intended to assist graduate students and researchers in the field of organic electronics to use theory to design more efficient materials for organic electronic devices such as organic solar cells, light emitting diodes, and field effect transistors. After addressing some basic topics in solid state physics, a comprehensive introduction to molecular orbitals and band theory leads to a description of computational methods based on Hartree Fock and density functional theory. DFT for predicting geometry, conformations, frontier levels, and energy band structures. Topological defects and transport and optical properties are then addressed, and one of the most commonly used transparent conducting polymers, PEDOT:PSS, is described in some detail as a case study.
