**Data Smart** John W. Foreman, 2013-10-31 Data Science gets thrown around in the press like it's magic Major retailers are predicting everything from when their customers are pregnant to when they want a new pair of Chuck Taylors It's a brave new world where seemingly meaningless data can be transformed into valuable insight to drive smart business decisions But how does one exactly do data science Do you have to hire one of these priests of the dark arts the data scientist to extract this gold from your data Nope Data science is little more than using straight forward steps to process raw data into actionable insight And in Data Smart author and data scientist John Foreman will show you how that's done within the familiar environment of a spreadsheet Why a spreadsheet It's comfortable You get to look at the data every step of the way building confidence as you learn the tricks of the trade Plus spreadsheets are a vendor neutral place to learn data science without the hype But don't let the Excel sheets fool you This is a book for those serious about learning the analytic techniques the math and the magic behind big data Each chapter will cover a different technique in a spreadsheet so you can follow along Mathematical optimization including non linear programming and genetic algorithms Clustering via k means spherical k means and graph modularity Data mining in graphs such as outlier detection Supervised AI

through logistic regression ensemble models and bag of words models Forecasting seasonal adjustments and prediction intervals through monte carlo simulation Moving from spreadsheets into the R programming language You get your hands dirty as you work alongside John through each technique But never fear the topics are readily applicable and the author laces humor throughout You'll even learn what a dead squirrel has to do with optimization modeling which you no doubt are dying to know
