*Quick Start Guide to Large Language Models* Sinan Ozdemir, 2024-09-26

The Practical Step by Step Guide to Using LLMs at Scale in Projects and Products

Large Language Models LLMs like Llama 3 Claude 3 and the GPT family are demonstrating breathtaking capabilities but their size and complexity have deterred many practitioners from applying them. In Quick Start Guide to Large Language Models Second Edition, pioneering data scientist and AI entrepreneur Sinan Ozdemir clears away those obstacles and provides a guide to working with integrating and deploying LLMs to solve practical problems. Ozdemir brings together all you need to get started even if you have no direct experience with LLMs: step-by-step instructions, best practices, real-world case studies, and hands-on exercises. Along the way, he shares insights into LLMs' inner workings to help you optimize model choice, data formats, prompting, fine-tuning, performance, and much more. The resources on the companion website include sample datasets and up-to-date code for working with open and closed-source LLMs such as those from OpenAI (GPT 4 and GPT 3.5), Google (BERT, T5), and Gemini X. Grok, Anthropic, the Claude family, Cohere, the Command family, and Meta (BART and the LLaMA family). Learn key concepts, pre-training, transfer learning, fine-tuning, attention, embeddings, tokenization, and more. Use APIs and Python to fine-tune and customize LLMs for your requirements. Build a complete neural semantic information retrieval system and attach to conversational LLMs for building retrieval-augmented generation (RAG) chatbots and AI Agents. Master advanced prompt engineering techniques like output structuring, chain of thought prompting, and semantic few-shot prompting. Customize LLM embeddings to build a complete recommendation engine from scratch with user data that outperforms out-of-the-box embeddings from OpenAI. Construct and fine-tune multimodal Transformer architectures from scratch using open-source LLMs and large visual datasets. Align LLMs using Reinforcement Learning from Human and AI Feedback (RLHF, RLAIF) to build conversational agents from open models like Llama 3 and FLAN T5. Deploy prompts and custom fine-tuned LLMs to the cloud with scalability and evaluation pipelines in mind. Diagnose and optimize LLMs for speed, memory, and performance with quantization, probing, benchmarking, and evaluation frameworks. A refreshing and inspiring resource, jam-packed with practical guidance and clear explanations that leave you smarter about this incredible new field.

*Understanding Religion and Artificial Intelligence* Randall Reed, Tracy J. Trothen, 2025-09-15

Is artificial intelligence just another tool or is it something more Special? In *Understanding Religion and Artificial Intelligence: Meaning Making in the Digital Age*, Randall Reed and Tracy J. Trothen delve into this provocative question, revealing how our perceptions of AI are deeply intertwined with age-old human impulses to define the extraordinary. Introducing their innovative Model of the Special, Reed and Trothen illuminate how individuals, groups, and cultures dynamically shape AI's meaning, ranging from the mundane to the Sacred and Demonic. Through compelling case studies from AI chatbots, sport, and art to self-driving cars and Deadbots, the authors explore how narratives of awe, fear, and even transcendence position AI as a truly Special thing in our modern world. Drawing on insights from religious studies, ethics, and sociology, this interdisciplinary exploration provides a crucial framework for understanding the profound societal, ethical, and spiritual implications of AI.

*Understanding Religion and Artificial Intelligence* invites readers to engage in vital conversations about AI's impact on meaning, values, and the very fabric of human experience in this rapidly evolving digital age. Prepare to see AI and ourselves in a whole new light.

*Four Battlegrounds* Paul Scharre, 2023-02-28

An NPR 2023 Books We Love Pick. One of the Next Big Idea Club's Must Read Books. An invaluable primer to arguably the most important driver of change for our future. P.W. Singer, author of *Burn In*, an award-winning defense expert, tells the story of today's great power rivalry: the struggle to control artificial intelligence. A new industrial revolution has begun. Like mechanization or electricity before it, artificial intelligence will touch every aspect of our lives and cause profound disruptions in the balance of global power, especially among the AI superpowers: China, the United States, and Europe. Autonomous weapons expert Paul Scharre takes readers inside the fierce competition to develop and implement this game-changing technology and dominate the future. *Four Battlegrounds* argues that four key elements define this struggle: data, computing power, talent, and institutions. Data is a vital resource, like coal or oil, but it must be collected and refined. Advanced computer chips are the essence of computing power; control over chip supply chains grants leverage over rivals. Talent is about people: which country attracts the best researchers and most advanced technology companies. The fourth battlefield is maybe the most critical: the ultimate global leader in AI will have institutions that effectively incorporate AI into their economy, society, and especially their military. Scharre's account surges with futuristic technology. He explores the ways AI systems are already discovering new strategies via millions of war game simulations, developing combat tactics better than any human tracking billions of people using biometrics and subtly controlling information with secret algorithms. He visits China's National Team

of leading AI companies to show the chilling synergy between China's government private sector and surveillance state He interviews Pentagon leadership and tours U.S. Defense Department offices in Silicon Valley revealing deep tensions between the military and tech giants who control data chips and talent Yet he concludes that those tensions inherent to our democratic system create resilience and resistance to autocracy in the face of overwhelmingly powerful technology Engaging and direct Four Battlegrounds offers a vivid picture of how AI is transforming warfare global security and the future of human freedom and what it will take for democracies to remain at the forefront of the world order
