*Use Challenges to Convert Like Crazy: The Audience Activation Strategy* Simon Schroth, 2025-04-05 Challenges are a powerful way to engage your audience and drive conversions. Use Challenges to Convert Like Crazy shows you how to create and execute challenges that not only engage your audience but also convert them into paying customers. This book teaches you how to design challenges that provide value, build excitement and motivate participants to take action. You'll learn how to structure your challenge, create a sense of urgency and use gamification to increase engagement and drive sales. The book also covers how to use challenges as a lead generation tool and how to follow up with participants to convert them into long term customers. Whether you're launching a new product, growing your email list or simply increasing engagement with your audience, Use Challenges to Convert Like Crazy gives you the tools to leverage challenges for massive business growth.

**New-generation vaccines and novel vaccinal strategies against infectious diseases of livestock, wild and companion animals** Denis Archambault, Raul Manzano Roman, Suresh Kumar Tikoo, Christophe Chevalier, Brad Pickering, 2023-08-25 Emerging and re-emerging infections, in particular those caused by viruses, are expected to rise in correlation with other factors, such as climate changes. Antibiotic resistance is another issue that will limit the therapeutic arsenal against bacterial and parasitic infections. Therefore, one must be adequately prepared to overcome and prevent current and novel infections, and vaccination remains the optimal way to fight infectious diseases in humans. This is also true for many impacting diseases of livestock and companion animals, to which there are no available vaccines. First attenuated and inactivated and second subunit generation vaccines have their limitations. To overcome this, efforts have been made in recent years to develop novel vaccine types, such as virus-like particle (VLP), viral vector and DNA-based vaccines in humans and animals. The recent success in utilizing RNA technology-based vaccines to fight SARS-CoV-2 to limit the severity of clinical symptoms and mortality constitutes a promising way to develop such vaccines against animal diseases. Development of novel molecules or materials with adjuvant or immunostimulatory activity to adequately stimulate the innate immune response and, therefore, the pathogen-specific adaptive immune response, as well as the identification of suitable antigenic material that would bring broad protection against infectious agent variants, are other key issues to be considered in developing safe and innovative immunization strategies.
