**Strategic Finance** ,2008    **Google and the Mission to Map Meaning and Make Money** Bart Milner,2004 This book is the unfolding story of the new technology of Internet Search how Larry Page and Sergey Brin the founders of Google discovered a new way to index the Internet s network of networks by developing Search methods so powerful that they effectively created a free public and universal library out of billions of random documents It also tells how together with the help of a brilliant team built initially at Stanford University they then found a new way of making money through contextual advertising now worth e billion leaving potential competitors particularly Microsoft far behind It shows how Google s founders have also succeeded in insisting that integrity rather than profit remains at the heart of an enterprise that they will continue to control despite the best efforts of Wall Street The second half of this book also seeks to explain the central problems of machine intelligence the difference between words and their meaning or syntax and semantics which had blocked this kind of IT development for half a century until Google s founders discovered that hypertext the unique feature of the Internet that links documents could be measured and mapped to sort millions of apparently similar pages for relevance and significance Google s pursuit of a hugely ambitious and optimistic American dream that leaves them globally admired and respected keeping their principles intact whilst also creating a fabulously wealthy company is a winning blend of luck jokes mathematical inspiration engineering perspiration deep technical knowledge of the Internet and they would have you believe thousands of highly trained pigeons The book is 288 pages long including a comprehensive index and 600 item

bibliography covering virtually all aspects of Internet Search The print version of the book comes with a free online electronic version with hypertext links to related articles and books designed to make any aspect of the history of Internet search easy to find with a couple of mouse clicks The book's author Bart Milner is a trained technology journalist and editor who started using the Web in 1984 with a 300 baud acoustic coupler and then became a developer partly to try and solve the question of why computer logic has been unable to deal with meaning and association This background has given him an insight into the inspired but almost accidental way that Google's founders cracked the problem of finding a significant document from billions of unindexed and changing Web pages in a fraction of a second Anyone interested in the future of the Internet and Information Technology should enjoy this fast and fluid story of a company which has become a flagship business of the 21st century by not conceding any of its integrity and principles to the huge pressures of commercial profit whilst providing some of the most elegant and powerful engineering solutions ever seen on the Net     **Lodging** ,2008

**PC World** ,2009     *JavaServer Faces 2.0, The Complete Reference* Ed Burns,Chris Schalk,2009-11-23 The Definitive Guide to JavaServer Faces 2.0 Fully revised and updated for all of the changes in JavaServer Faces JSF 2.0 this comprehensive volume covers every aspect of the official standard Web development architecture for JavaEE Inside this authoritative resource the co spec lead for JSF at Sun Microsystems shows you how to create dynamic cross browser Web applications that deliver a world class user experience while preserving a high level of code quality and maintainability JavaServer Faces 2.0 The Complete Reference features an integrated sample application to use as a model for your own JSF applications with code available online The book explains all JSF features including the request processing lifecycle managed beans page navigation component development Ajax validation internationalization and security Expert Group Insights throughout the book offer insider information on the design of JSF Set up a development environment and build a JSF application Understand the JSF request processing lifecycle Use the Facelets View Declaration Language managed beans and the JSF expression language EL Define page flow with the JSF Navigation Model including the new Implicit Navigation feature Work with the user interface component model and the JSF event model including support for bookmarkable pages and the POST REDIRECT GET pattern Use the new JSR 303 Bean Validation standard for model data validation Build Ajax enabled custom UI components Extend JSF with custom non UI components Manage security accessibility internationalization and localization Learn how to work with JSF and Portlets from the JSF Team Leader at Liferay the leading Java Portal vendor Ed Burns is a senior staff engineer at Sun Microsystems and is the co specification lead for JavaServer Faces He is the co author of JavaServer Faces The Complete Reference and author of Secrets of the Rock Star Programmers Chris Schalk is a developer advocate and works to promote Google's APIs and technologies He is currently engaging the international Web development community with the new Google App Engine and OpenSocial APIs Neil Griffin is committer and JSF Team Lead for Liferay Portal and the co founder of The PortletFaces Project Ready to use code at [www](http://www)
