Promotion of business transfers in the Baltic Sea Region Max Hogeforster, Christian Wildt, 2021-09-21 The ageing of society does not stop at company owners More and more companies have to be handed over to the new generation This process is a challenge for all parties involved The support of business transfer assistance is just as essential for the European economy as the promotion of start ups because both are critical to the development of the European economy Over 450 000 firms with over two million jobs are transferred to a new owner in the EU 28 each year Around one third of these transfers fail and the companies are closed The future growth and sustainability of innovative companies in the Baltic Sea Region are severely limited by failed business transfers Furthermore due to a lack of available and appropriate successors many firms are liquidated rather than transferred This publication is part of the project INBETS www.inbets.eu highlights the background to the current situation of business transfers in the Baltic Sea Region and proposes a policy program to promote business successions and open up new target groups of potential successors Part financed by the

Retroviral Insertion and Oncogene Activation Hsing-Jien Kung,Peter K. Vogt,1991 An integrated retrovirus effectively becomes part of the cellular genome but with the difference that the virus to a large extent retains control over its own expression through nontranslated sequences in the long terminal repeat L TR Some retroviruses also code for nonstructural proteins that further regulate proviral expression Integration changes the cell genome it adds viral genes and in the case of transducing retroviruses also adds cell derived oncogenes that have been incorporated into the viral genome Integration can also have consequences for cellular genes The transcriptional signals in a provirus can activate expression of neighboring cellular genes the integration even can disrupt and thus inactivate cellular genes These effects of retroviral genomes take place in cis they are referred to as insertional mutagenesis and are the subject of this volume Almost 10 years have passed since W Hayward S Astrin and their colleagues found that in B cell lymphomas of chickens induced by avian leukosis virus transcription of the cellular proto oncogene myc was upregulated through the integration of a complete or partial provirus in its vicinity This landmark
