*Google and the Law* Aurelio Lopez-Tarruella, 2012-02-23 Google's has proved to be one of the most successful business models in today's knowledge economy. Its services and applications have become part of our day to day life. However, Google has repeatedly been accused of acting outside the law in the development of services such as Adwords, Googlebooks or YouTube. One of the main purposes of this book is to assess whether those accusations are well founded. But more important than that, this book provides a deeper reflection on current legal systems adapted to business models such as that of Google or are they conceived for an industrial economy. Do the various lawsuits involving Google show an evolution of the existing legal framework that might favour the flourishing of other knowledge economy businesses? Or do they simply reflect that Google has gone too far? What lessons can other knowledge based businesses learn from all the disputes in which Google has been or is involved? This book is valuable reading for legal practitioners and academics in the field of information technologies and intellectual property law, economists interested in knowledge economy business models and sociologists interested in internet and social networks. Dr Aurelio Lopez Tarruella is Senior Lecturer in Private International Law at the University of Alicante, Spain.

*Pricing and Revenue Optimization* Robert L. Phillips, 2021-05-18 This book offers the first introduction to the concepts, theories and applications of pricing and revenue optimization. From the initial success of yield management in the commercial airline industry down to more recent successes of markdown management and dynamic pricing, the application of mathematical analysis to optimize pricing has become increasingly important across many different industries. But since pricing and revenue optimization has involved the use of sophisticated mathematical techniques, the topic has remained largely inaccessible to students and the typical manager. With methods proven in the MBA courses taught by the author at Columbia and Stanford Business Schools, this book presents the basic concepts of pricing and revenue optimization in a form accessible to MBA students, MS students and advanced undergraduates. In addition, managers will find the practical approach to the issue of pricing and revenue optimization invaluable. With updates to every chapter, this second edition covers topics such as estimation of price response functions and machine learning based price optimization. New discussions of applications of dynamic pricing and revenue management by companies such as Amazon, Uber and Disney and in industries such as sports theater and electric power are also included. In addition, the book provides current coverage of important applications such as revenue management, markdown management, customized pricing and the behavioral economics of pricing.
