Accordingly, despite touch screen tablets entering society more than 5 years ago, we are in the infancy of research concerning interactive media and children. The topic has gained traction in the past couple of years. For example, theoretical papers have discussed how interactive media activities differ from physical toys and passive media. Christakis 2014 and how educational apps development should utilise the four pillars of learning. Hirsh Pasek et al 2015. Yet there has been little experimental research published on young children and touch screen use.
