Design David F. Palmer, 1979 This tutorial defines a design approach for distributed computing systems We are concerned with systems composed of potentially many processing and memory components working together to serve a common application For these designs control of the system is decentralized i.e. the controller does not reside in a single processor Distributed systems are less costly thanks to the ability to replace reprogram single components which means better reliability and fault tolerance Decentralization eliminates single point failure **TV Guide**, 2003 **Business Week**, 2006
