PV Charging and Storage for Electric Vehicles Pavol Bauer,Gautham Ram Chandra Mouli,2021-09-02 Electric vehicles are only green as long as the source of electricity is green as well At the same time renewable power production suffers from diurnal and seasonal variations creating the need for energy storage technology Moreover overloading and voltage problems are expected in the distributed network due to the high penetration of distributed generation and increased power demand from the charging of electric vehicles The energy and mobility transition hence calls for novel technological innovations in the field of sustainable electric mobility powered from renewable energy This Special Issue focuses on recent advances in technology for PV charging and storage for electric vehicles Financial Accounting with International Financial Reporting Standards Jerry J. Weygandt,Paul D. Kimmel,2022-07-20 An essential and intuitive treatment of financial accounting with an international perspective The use of International Financial Reporting Standards is growing rapidly both outside of the United States and within especially as IFRS incorporates more US GAAP rules In the newly updated fifth edition of Financial Accounting with International Financial Reporting Standards a team of accomplished financial practitioners and educators delivers the newest version of their highly anticipated text This important work offers practical end of chapter exercises and practice problems complete with foreign currency examples as well as an emphasis on non US companies and examples It is perfect for accounting students seeking exposure to internationally utilized accounting standards

EPAC 98 S. Myers,1998 **An Electric Vehicle Conversion Start-Up. Development of a Business Model Approach** Fabian Hoeft,2019-10-24 Master s Thesis from the year 2019 in the subject Business economics Business Management Corporate Governance grade 1 3 Niederrhein University of Applied Sciences Krefeld School of Business and Economics language English abstract Today s world of mobility is characterised by a high degree of dynamism and change is becoming apparent Currently around 45 million passenger cars with conventional combustion engines powered by diesel or petrol are registered in Germany The share of electric vehicles is still well below one per cent Nevertheless the voices for sustainable and environmentally friendly transport are becoming louder One political measure in this respect is the implementation of driving bans in major German cities for some conventional combustion cars Car electrification is a solution for converting cars with conventional combustion engines to electric drives In the context of this thesis car electrification is regarded as a transition solution towards a nationwide electrified transport network of new electric cars A comprehensive concept of a business model approach from a start up perspective has been developed based

on the analysis of the environment industry and customer needs Analysing the structure of the electrical conversion industry revealed that the subject of car electrification is hardly widespread and that current suppliers have only converted a smaller number of cars Besides the small scale of implementation the operational execution by existing suppliers can be considered weak in terms of competitiveness and sustainability The analysis of the needs of potential customers of car electrification using qualitative and quantitative methods has led to incredibly valuable insights for the development of the business model approach A high openness to purchase was expressed considering some of the factors mentioned such as a test drive with an electrified car before purchase and a durability guarantee of the conversion The high relevance of initial acquisition costs compared to operating expenses in the purchase decision for passenger cars is another precious insight The business model approach developed based on the findings obtained differs fundamentally from the strategies of today s providers By incorporating the existing infrastructure of workshops and service points proximity to the end customer and scalability of the business operation can be achieved Partnering with universities and industry are two critical elements in the development of a sustainable secure and user friendly technical solution
