Enabling Technologies for Effective Planning and Management in Sustainable Smart Cities Mohd Abdul Ahad,Gabriella Casalino,Bharat Bhushan,2023-03-01 With the rapid penetration of technology in varied application domains the existing cities are getting connected more seamlessly Cities becomes smart by inducing ICT in the classical city infrastructure for its management According to McKenzie Report about 68% of the world population will migrate towards urban settlements in near future This migration is largely because of the improved Quality of Life QoL and livelihood in urban settlements In the light of urbanization climate change democratic flaws and rising urban welfare expenditures smart cities have emerged as an important approach for society s future development Smart cities have achieved enhanced QoL by giving smart information to people regarding healthcare transportation smart parking smart traffic structure smart home smart agronomy community security etc Typically in smart cities data is sensed by the sensor devices and provided to end users for further use The sensitive data is transferred with the help of internet creating higher chances for the adversaries to breach the data Considering the privacy and security as the area of prime focus this book covers the most prominent security vulnerabilities associated with varied application areas like healthcare manufacturing transportation education and agriculture etc Furthermore the massive amount of data being generated through ubiquitous sensors placed across the smart cities needs to be handled in an effective efficient secured and privacy preserved manner Since a typical smart city ecosystem is data driven it is imperative to manage this data in an optimal manner Enabling technologies like Internet of Things IoT Natural Language Processing NLP Blockchain Technology Deep Learning Machine Learning Computer vision Big Data Analytics Next Generation Networks and Software Defined Networks SDN provide exemplary benefits if they are integrated in the classical city ecosystem in an effective manner The application of Artificial Intelligence AI is expanding across many domains in the smart city such as infrastructure transportation environmental protection power and energy privacy and security governance data management healthcare and more AI has the potential to improve human health prosperity and happiness by reducing our reliance on manual labor and accelerating our progress in the sciences and technologies NLP is an extensive domain of AI and is used in collaboration with machine learning and deep learning algorithms for clinical informatics and data processing In modern smart cities blockchain provides a complete framework that controls the city operations and ensures that they are managed as effectively as possible Besides having an impact on our daily lives it also facilitates many areas of city management   **Artificial Neural Networks Exam Guide** Cybellium, Welcome to the forefront of knowledge with Cybellium your trusted partner in mastering the cutting edge fields of IT Artificial Intelligence Cyber Security Business Economics and Science Designed for professionals students and enthusiasts alike our comprehensive books empower you to stay ahead in a rapidly evolving digital world Expert Insights Our books provide deep actionable insights that bridge the gap between theory and practical application Up to Date Content Stay current with the latest advancements trends and best

networks On today s most advanced supercomputers networks with up to a billion of neurons can be readily simulated However building biologically realistic full scale brain models requires more than just a huge number of neurons In addition to network size the detailed local and global anatomy of neuronal connections is of crucial importance Moreover anatomical connectivity is not fixed but can rewire throughout life structural plasticity an aspect that is missing in most current network models in which plasticity is confined to changes in synaptic strength synaptic plasticity The papers in this Ebook which may broadly be divided into three themes aim to bring together high performance computing with recent experimental and computational research in neuroanatomy In the first theme fiber connectivity new methods are described for measuring and data basing microscopic and macroscopic connectivity In the second theme structural plasticity novel models are introduced that incorporate morphological plasticity and rewiring of anatomical connections In the third theme large scale simulations simulations of large scale neuronal networks are presented with an emphasis on anatomical detail and plasticity mechanisms Together the articles in this Ebook make the reader aware of the methods and models by which large scale brain networks running on supercomputers can be extended to include anatomical detail and plasticity   IEEE Spectrum ,2009   **Real Time Graphics** ,2002   **Science & Technology Review** ,2015   **NPAR ...
