Panarchy Understanding Transformations In Human And Natural Systems:

Panarchy Lance H. Gunderson, C. S. Holling, 2002 Bringing together leading thinkers on the subject this book examines how to develop and examine the concept of panarchy and to consider how it can be applied to human natural and human natural systems Throughout contributors seek to identify adaptive approaches to management that recognize uncertainty and encourage innovation while fostering resilience Tables figures index *Panarchy Synopsis* Lance H. Gunderson, 2002-08-01 Panarchy is a new term coined from the name of the Greek god Pan a symbol of universal nature and associated with unpredictable change It represents an alternative framework for managing the issues that emerge from the interaction between people and nature That interaction generates countless surprises often the result of slow changes that can accumulate and unexpectedly flip an ecosystem or an economy into a qualitatively different state That state may be not only impoverished but also effectively irreversible Thus understanding how such change occurs is critical to achieving a sustainable society Developed from the work of the Resilience Alliance a worldwide group of leading organizations and individuals involved in ecological and economic research Panarchy provides a framework to understand the cycles of change in complex systems and to gauge if when and how they can be influenced This synopsis introduces lay readers and decision makers to this widely acclaimed line of inquiry and to the basic concept behind Panarchy published by Island Press

Adaptive Co-Management Derek Armitage, Fikret Berkes, Nancy Doubleday, 2010-10-01 In Canada and around the world governments are shifting away from regulatory models for governing natural and cultural resources New concerns with adaptive processes feedback learning and flexible partnerships are reshaping environmental governance Meanwhile ideas about collaboration and learning are converging around the idea of adaptive co management This book provides a comprehensive synthesis of the core concepts strategies and tools in this emerging field informed by a diverse group of researchers and practitioners with over two decades of experience It also offers a diverse set of case studies that reveal the challenges and implications of adaptive co management thinking and synthesizes lessons for natural and cultural resource governance in a wide range of contexts Adaptive Co Management is not only a timely book but also a useful concept for resource governance in a world marked by rapid socio ecological change It will be of interest to researchers environmental practitioners policy makers and students in fields across the political and environmental spectrum **The Complex Forest** Carol J.P. Colfer, 2010-09-30 The Complex Forest systematically examines the theory processes and early outcomes of a research and management approach called adaptive collaborative management ACM An alternative to positivist approaches to development and conservation that assume predictability in forest management ACM acknowledges the complexity and unpredictability inherent in any forest community and the importance of developing solutions together with the forest peoples whose lives will be most affected by the outcomes Building on earlier work that established the importance of flexible collaborative approaches to sustainable forest management The Complex Forest describes the work of ACM practitioners

facing a broad range of challenges in diverse settings and attempts to identify the conditions under which ACM is most effective Case studies of ACM in 33 forest sites in 11 countries together with Colfer's systematic comparison of results at each site indicate that human and institutional capabilities have been strengthened In Zimbabwe for example the number of women involved in decisionmaking soared In Nepal community members detected and sanctioned dishonest community elites In Cameroon and Bolivia learning programs resulted in better conflict management These are early results but a wide range of recent research supports Colfer's belief that these new capabilities will eventually contribute to higher incomes and to sustainable improvements in the health of forests and forest peoples The Complex Forest reinforces calls for change in the way we plan conservation and development programs away from command and control approaches toward ones that require bureaucratic flexibility and responsiveness as well as greater local participation in setting priorities and problem solving

Dividing Africa with Policy Lara Hierro,2020-06-08 This book addresses timely concerns of rising African nationalism and the 2nd decolonisation in Africa The wholesale rejection of all things considered Western is seen to be a result of integrationalism defined as the specific kind of methodology by which EU foreign policy engagement may be interpreted Using complexity theory and panarchy a specific arrangement of interacting complex adaptive systems together with a resilience assessment the EU's foreign policy is shown to be undermining the aims of the premier African institution the AU created to provide unity and security on the continent the EU pursues these objectives in its own image rather than honouring African values This book raises awareness of these issues as well as to widen the application of the theoretical framework in international relations and politics which is becoming increasingly important in a complex world The aim of this book is to show that the negative isolationism pursued in order to counteract western influence is not the answer and can be avoided through this awareness **Greening in the Red Zone** Keith G. Tidball,Marianne E. Krasny,2013-07-22 Creation

and access to green spaces promotes individual human health especially in therapeutic contexts among those suffering traumatic events But what of the role of access to green space and the act of creating and caring for such places in promoting social health and well being Greening in the Red Zone asserts that creation and access to green spaces confers resilience and recovery in systems disrupted by violent conflict or disaster This edited volume provides evidence for this assertion through cases and examples The contributors to this volume use a variety of research and policy frameworks to explore how creation and access to green spaces in extreme situations might contribute to resistance recovery and resilience of social ecological systems *Coastal Management Revisited* Bernhard Glaeser,Marion Glaser,2023-01-31 The book

presents an overview and historic perspectives of a novel scientific field coming of age today coastal and ocean management It covers diverse and changing issues ranging from conflict resolution to governance and ethical political imperatives natural disasters and climate change culminating in coastal and ocean typologies the basis for a future theory of coasts and oceans Eighteen chapters written by two main authors in cooperation with international experts review 25 years of research The

authors address challenges to society related to global change issues that have been generated by human activity in both temperate Sweden Germany and the United States and tropical regions Brazil Indonesia Ultimately the book documents the maturation of a field and responds to changing societal needs and scientific outlooks It gathers recent analyses along with important earlier research with a foreword by Biliiana Cicin Sain and Richard Delaney globally renowned as coastal and ocean experts in theory and practice Its broad approach makes the book a must read for graduate and postgraduate students as well as coastal management and marine spatial planning practitioners and for researchers in the fields of geography anthropology history of science human and social ecology and environmental and development studies **Systems**

Theorists and practitioners in the burgeoning field of ecological restoration are departing from the ideal of passive hands off interaction with our environment in favor of active attempts to invent design or restore ecosystems In *Inventing Nature* Matthias Gross argues on the basis of his analysis of diverse restoration efforts in North America that a new understanding of the relationship between human actors and nature is needed No longer merely a laboratory for scientists no longer sacred space to be left alone in the context of ecological restoration physical surroundings must be understood as our partner and peer in the project of community building *Inventing Nature* offers a way past the social constructivist versus realist debate in the environmental social sciences that is both scholarly rigorous and practically engaged **Report of the Annual Meeting of the South African Association for the Advancement of Science**, 2006
