**Handbook of Pharmacokinetics and Toxicokinetics** Mehdi Boroujerdi, 2023-08-22 This fully revised and expanded volume is an effort to blend the common approaches to pharmacokinetics and toxicokinetics. It integrates the principles held in common by both fields through a logical and systematic approach which includes mathematical descriptions of physical and physiological processes employed in the approaches to pharmacokinetics and toxicokinetics modeling. It emphasizes general principles and concepts and related isolated applications and case study observations. The systematic compilation of mathematical concepts and methodologies allows readers to decide on relevant concepts and approaches for their research, scientific or regulatory decisions or for offering advanced courses, workshops and seminars. Features Comprehensive handbook on principles and applications of PK TK appealing to a diverse audience including scientists and students. An excellent text fully revised and fully updated for anyone interested in the theoretical and practical pharmacokinetics. The systematic compilation of mathematical concepts and methodologies allows readers to decide on relevant concepts and approaches for their research. Incorporates research relevant to SDGs and of interest to industrial and regulatory environmental scientists involved in chemical contamination research and regulatory decision making related to soil, water and ocean. Includes sections on applications and case studies.

**Coastal Oceanography of Washington and Oregon** M.R. Landry, B.M. Hickey, 1989-03-01 The Washington Oregon coastal zone is a classical Eastern Boundary Current region. The area is extremely productive, the productivity dependent on near shore infusions of nutrients into surface layers during wind driven coastal upwelling. The Washington Oregon coastline is much more regular than areas off California or off the East Coast where large capes lend complexity to both the physical environment and the ecosystem response. The relatively straight coastline and broad deep shelf greatly simplify the physical environment so that processes responsible for much of the variance are more easily identified. The system response from mid Oregon northward, although not strictly two dimensional, is more so than many other coastal areas. Consequently the system is amenable to the testing of relatively simple models integrating wind forcing with physical, chemical and biological responses in the upper water column. This book is an integrated synthesis of physical, chemical, geological and biological research in a dynamic shelf ecosystem characterized by seasonal wind driven upwelling, major river influences, extensive silt deposits, productive pelagic and demersal fisheries and unique surf zone communities. The broad scope of the book includes detailed analyses of physical circulation and sediment transport, production and utilization of organic matter in the marine food web, river influences on regional hydrology and sediment deposition, inputs and inventories of anthropogenic chemicals in the water column and sedimentary deposits. Much of the book is based on primary analyses of previously unpublished data sets. Interdisciplinary approaches are emphasized in models and discussions of coastal upwelling dynamics, hydrographic patterns and anomalies, benthic boundary layer processes and larval transport, oceanographic influences on commercial stocks, mechanics of chemical cycling and

accumulation and surf zone production An extensive index and references complete the book The book is intended both to document and explain specific regional features of the Washington Oregon shelf system and more generally to illustrate the complexities of interactive influences on the dynamics of coastal ecosystems Oceanographers both researchers and students will be very interested in this book and it can also be used by governmental agencies and industries dealing with coastal zone management and planning

**Physiological, Developmental and Behavioral Effects of Marine Pollution** Judith S Weis,2013-08-13 Synthesizing decades of work but up to date this book focuses on organism level responses to pollutants by marine animals mainly crustaceans molluscs and fishes Emphasizing effects on physiological processes feeding digestion respiration osmoregulation life cycle reproduction including endocrine disruption embryo development larval development developmental processes later in life growth regeneration molting calcification cancer and behaviour the book also covers bioaccumulation and detoxification of contaminants and the development of tolerance The major pollutants covered are metals organic compounds oil pesticides industrial chemicals nutrients and hypoxia contaminants of emerging concern and ocean acidification Some attention is also devoted to marine debris and noise pollution
