Advances in Simulation and Digital Human Modeling Daniel N Cassenti, Sofia Scataglini, Sudhakar L. Rajulu, Julia L. Wright, 2020-06-27 This book presents the latest advances in modeling and simulation for human factors research. It reports on cutting edge simulators such as virtual and augmented reality multisensory environments and modeling and simulation methods used in various applications including surgery, military operations, occupational safety, sports training, education, transportation, and robotics. Based on two AHFE 2020 Virtual Conferences such as the AHFE 2020 Virtual Conference on Human Factors and Simulation and the AHFE 2020 Virtual Conference on Digital Human Modeling and Applied Optimization held on July 16-20, 2020, the book serves as a timely reference guide for researchers and practitioners developing new modeling and simulation tools for analyzing or improving human performance. It also offers a unique resource for modelers seeking insights into human factors research and more feasible and reliable computational tools to foster advances in this exciting field. **Energy Research Abstracts**, 1984 *Science Abstracts*, 1993 **Science Reporter**, 2005

Transport and Energy Research Junyi Zhang, 2019-09-17 *Transport and Energy Research: A Behavioral Perspective* deals with the transport issues associated with energy from a behavioral perspective in an interdisciplinary and systematic way. Existing transport and energy research has focused on technologies and energy efficiency; however, more efficient technologies do not necessarily lead to energy reduction. Unfortunately, very limited behavioral research can be found in the literature. This book covers major transport modes in major countries. It emphasizes the importance of researching the behaviors of not only transport and energy service users but also transport and energy service providers, policy makers, organizations, company managers, and other stakeholders who are involved in and/or affected by transport and energy policies. It not only overviews the history of relevant research and presents new developments but also extensively discusses the future research issues. Various findings are summarized for reducing energy consumption from a behavioral perspective. This book provides readers with behavioral insights into more effective policymaking. Behavioral interventions are recommended as a key policy instrument for reducing energy consumption in a sustainable way. It provides policy makers with comprehensive insights into making more effective policies over the whole process of policymaking. The book can serve as a handbook for researchers and a textbook for graduate students in the fields of transport, energy, environment, planning, public policy, behavioral studies, and so on. Examines transport and domestic issues associated with energy from a behavioral perspective in both an interdisciplinary and comprehensive way. Offers an overview of current relevant research and the most recent developments. Provides rich information about future research trends and innovative insights into effective policymaking. **Distribution System Field Study with California Utilities to Assess Capacity for Renewables and Electric Vehicles** Alexandra von Meier, California Institute for Energy and Environment, 2015 **Active Experiments in Space** European Space Agency, 1983 Energy Research Abstracts, 1987 *R & D Abstracts* Technology Reports Centre
