**New Trends on System Science and Engineering** H. Fujita, S.-F. Su, 2015-06-23 System science and engineering is a field that covers a wide spectrum of modern technology. A system can be seen as a collection of entities and their interrelationships which forms a whole greater than the sum of the entities and interacts with people, organisations, cultures and activities and the interrelationships among them. Systems composed of autonomous subsystems are not new but the increased complexity of modern technology demands ever more reliable, intelligent, robust and adaptable systems to meet evolving needs. This book presents papers delivered at the International Conference on System Science and Engineering ICSSE2015 held in Morioka, Japan in July 2015. Some of the topics covered here include systems modeling tools and simulation, cloud robotics and computing systems, systems safety and security, smart grid, human systems and industrial organization and management and novel applications of systems engineering and systems architecture. Capturing as it does the latest state of the art and challenges in system sciences and its supporting technology, this book will be of interest to all those involved in developing and using system science methodology tools and techniques.
