Time Perception and Dysfunction: Clinical and Practical Implications Deana Davalos, Giovanna Mioni, Simon Grondin, Felipe Ortuño, 2019-02-19 Processing time requires a complex set of abilities that dictates how one adapts to the environment Timing is key in how we communicate organize our space and understand the world When timing is intact it often exists below one's conscious awareness but when one's ability to process time is disrupted the effects are noticeable and widespread To better understand the construct of temporal dysfunction one has to examine the concept of timing from multiple angles An integrative approach is required to understand the possible biological cognitive and psychological etiologies of temporal dysfunction In addition expertise in language measurement and psychopathology are necessary to comprehend how timing affects one's representation of the world This Research Topic is dedicated to examining timing and temporal dysfunction across a variety of tasks and disorders Specifically we seek to understand the most basic types of timing dysfunction and how they may affect a wide range of behaviors and symptoms as well as higher levels of temporal deficits involved in how one perceives the time spent This Research Topic represents the intersection of medicine psychology cognition and perception in a unified attempt to shed light on temporal processing The collection of original research articles and case studies highlighting novel methodologies and interventions illustrates the complexity of timing dysfunction and how understanding these deficits helps us to get a fresh look at a wide range of clinical psychopathologies and to develop better interventions

**Towards Semantically Enabled Complex Event Processing** Robin Keskisärkkä, 2017-10-30 The Semantic Web provides a framework for semantically annotating data on the web and the Resource Description Framework RDF supports the integration of structured data represented in heterogeneous formats Traditionally the Semantic Web has focused primarily on more or less static data but information on the web today is becoming increasingly dynamic RDF Stream Processing RSP systems address this issue by adding support for streaming data and continuous query processing To some extent RSP systems can be used to perform complex event processing CEP where meaningful high level events are generated based on low level events from multiple sources however there are several challenges with respect to using RSP in this context Event models designed to represent static event information lack several features required for CEP and are typically not well suited for stream reasoning The dynamic nature of streaming data also greatly complicates the development and validation of RSP queries Therefore reusing queries that have been prepared ahead of time is important to be able to support real time decision making Additionally there are limitations in existing RSP implementations in terms of both scalability and expressiveness where some features required in CEP are not supported by any of the current systems The goal of this thesis work has been to address some of these challenges and the main contributions of the thesis are 1 an event model ontology targeted at supporting CEP 2 a model for representing parameterized RSP queries as reusable templates and 3 an architecture that allows RSP systems to be integrated for use in CEP The proposed event model tackles issues specifically related to event modeling in CEP that have not been sufficiently covered by other event models includes support for event encapsulation and event payloads and can easily be extended to fit specific use cases The model for representing RSP query templates was designed as an extension to SPIN a vocabulary that supports modeling of SPARQL queries as RDF The extended model supports the current version of the RSP Query Language RSP QL developed by the RDF Stream Processing Community Group along with some of the most popular RSP query languages Finally the proposed architecture views RSP queries as individual event processing agents in a more general CEP framework Additional event processing components can be integrated to provide support for operations that are not supported in RSP or to provide more efficient processing for

specific tasks We demonstrate the architecture in implementations for scenarios related to traffic incident monitoring criminal activity monitoring and electronic healthcare monitoring      *The Spyglass Account* E.
