Constructive Knowledge Acquisition Franz

Schmalhofer,2019-01-04 A cognitive psychology which becomes increasingly specialized requires a special effort in order to avoid a fragmentation into several controversial issues that are independently discussed but also inherently related Rather than asking additional differentiated questions which are then investigated by more specialized experimental methods and designs this book promotes unified theories and a levels approach for their experimental evaluation Within this cognitive science approach and on the basis of the most foundational assumptions of Kintsch's construction integration theory a computational theory of knowledge acquisition is then developed and subsequently evaluated by psychological experiments For forty years computer simulation techniques and experimental psychology research have greatly matured the understanding of human knowledge and its acquisition in different learning environments This volume critically assesses the advantages and limitations of these approaches and then develops an integrated research methodology It goes on to provide significant progress concerning the following questions What are the most promising research methodologies for investigating human cognition How can the experimental psychology research on text comprehension concept formation and memory become more closely related to one another when the very specialized research paradigms and the highly specific scientific controversies promote their separation and independent discussion How can a general comprehension based theory bridge the gap between simple experimental settings and the real life situations that occur in education and work environments This book demonstrates how experimental psychology can proceed more successfully by investigating those aspects that are shared among different areas of research like text comprehension categorization and learning by exploration It also shows how unified theories can assist in applying experimental psychology and cognitive science results to areas such as intelligent tutoring systems instructional design and the development of expert systems in complex real world domains

Falconier, Ashley K. Randall, 2019-09-25 Dyadic coping is a concept that has received increased attention in psychological science within the last 20 years. Dyadic coping conceptualizes the way couples cope with stress together in sharing appraisals of demands, planning together how to deal with the stressors and engage in supportive or joint dyadic coping. Among the different theories of dyadic coping, the Systemic Transactional Model (STM) Bodenmann 1995, 1997, 2005 has been applied to many studies on couples coping with stress. While a recent meta-analysis shows that dyadic coping is a robust and consistent predictor of relationship satisfaction and couple's functioning in community samples, some studies also reveal the significance of dyadic coping in dealing with psychological disorders e.g. depression, anxiety or severe illness e.g. cancer, diabetes, COPD, etc. Researchers all over the world build their research on this or other concepts of dyadic coping and many typically use the Dyadic Coping Inventory (DCI) for assessing dyadic coping. So far, research on dyadic coping has been systematically presented in two books, one written by Revenson, Kayser, Bodenmann in 2005, focussing on emerging perspectives on couples coping, the other by Falconier, Randall, Bodenmann more recently in 2016, addressing intercultural aspects of dyadic coping in African American, Asian and European couples. This eBook gives an insight into recent dyadic coping research in different areas and countries.
