Okpaleke, 2023-12-23 This book makes a compelling case that lethal drone deployment as a counterterrorism tool and instrument of statecraft in targeted states engenders far reaching consequences for US grand strategy By examining how successive US administrations since 9 11 have deployed drones in pursuant of

different typologies of US grand strategic objectives the book probes the putative political and strategic goals drones supposedly advance and the impact of its continued proliferation for US for international security The book provides a powerful base of evidence for policy makers and researchers by pointing to the perils of deployment of drone technology beyond their immediate or short term objectives It also explores how non state actors and authoritarian regimes such as armed groups are harnessing armed drone technologies for their own political and military ends as well as the underlying implications for US grand strategy and international security at large     *Drones, Surveillance, and Targeted Killings* Anne C. Cunningham,2016-12-15 This timely anthology examines the use of drones by the military law enforcement border patrol and civilians Articles condoning the use of drones in military engagements abroad are balanced with reportage of civilian deaths and resulting creation of more terrorists Pieces touting the effectiveness of drones in domestic surveillance are countered by assertions that they violate Americans civil liberties Opinions about the pros and cons of drone use in securing our borders as well as the potential benefits and dangers of their commercial use will add to readers deep understanding of this complex issue     **Aerial Visibilities** Dennis Zuev,Gary Bratchford,2025-05-02 This book brings together diverse perspectives from a range of geographic settings and feature contributions from some of the key thinkers in the field It explores various facets of the relationship between verticality and visibility offering insights that deepen the understanding of this dynamic dyad This volume brings the sky and air into the view of visual sociology and argues that there is more to the sky than phenomenological and geopolitical dimensions The chapters use the common thread of aerial visibilities to emphasise the need to rethink the aerial in terms of complex relations between humans technological artefacts and devices vertical superstructures and non human others This rethinking helps unsettle notions of aerial biopolitics The chapters in this book foreground the visual to ask to what end the image of or efforts to create images through vertical registers shapes our understanding of the vertical world the communities and users this vertical world engages or impacts upon This book will be of interest to students and researchers in the fields of visual sociology geography urban studies media studies anthropology and cultural studies as well as those exploring the intersection of technology politics and spatial theory The chapters in this book were originally published in *Visual Studies*     *Dare to Change* Soon Juan Chee,1994     **Parliamentary Debates (Hansard)**. Great Britain. Parliament. House of Commons,1983 Contains the 4th session of the 28th Parliament through the session of the Parliament     **Adbusters** ,2009     *Drones and Responsibility* Ezio Di Nucci,Filippo Santoni de Sio,2016-07-01 How does the use of military drones affect the legal political and moral responsibility of different actors involved in their deployment and design This volume offers a fresh contribution to the ethics of drone warfare by providing for the first time a systematic interdisciplinary discussion of different responsibility issues raised by military drones The book discusses four main sets of questions First from a legal point of view we analyse the ways in which the use of drones makes the attribution of criminal responsibility to individuals for war crimes more complicated and what adjustments may be

required in international criminal law and in military practices to avoid responsibility gaps in warfare From a moral and political perspective the volume looks at the conditions under which the use of military drones by states is impermissible permissible or even obligatory and what the responsibilities of a state in the use of drones towards both its citizens and potential targets are From a socio technical perspective what kind of new human machine interaction might and should drones bring and which new kinds of shared agency and responsibility Finally we ask how the use of drones changes our conception of agency and responsibility The book will be of interest to scholars and students in military ethics and to those in law politics and the military involved in the design deployment and evaluation of military drones
