Optics Photonics 2015 Gamma Ray Technologies:

Engineering of Scintillation Materials and Radiation Technologies Mikhail Korzhik, Alexander Gektin, 2019-09-13

This proceedings book presents dual approaches to examining new theoretical models and their applicability in the search for new scintillation materials and ultimately the development of industrial technologies. The ISMART conferences bring together the radiation detector community from fundamental research scientists to applied physics experts, engineers and experts on the implementation of advanced solutions. This scientific forum builds a bridge between the different parts of the community and is the basis for multidisciplinary cooperative research and development efforts. The main goals of the conference series are to review the latest results in scintillator development from theory to applications and to arrive at a deeper understanding of fundamental processes as well as to discover components for the production of new generations of scintillation materials. The book highlights recent findings and hypotheses, key advances as well as exotic detector designs and solutions and includes papers on the microtheory of scintillation and the initial phase of luminescence development, applications of the various materials as well as the development and characterization of ionizing radiation detection equipment. It also touches on the increased demand for cryogenic scintillators, the renaissance of garnet materials for scintillator applications, nano structuring in scintillator development, trends in and applications for security and exploration of hydrocarbons and ecological monitoring.

Gamma Ray Imaging Junwei Du, Krzysztof (Kris) Iniewski, 2023-08-11

This book will provide readers with a good overview of some of the most recent advances in the field of detector technology for gamma ray imaging especially as it pertains to new applications. There will be a good mixture of general chapters in both technology and applications in medical imaging and industrial testing. The book will have an in depth review of the research topics from world leading specialists in the field. The conversion of the gamma ray signal into analog digital value will be covered in some chapters. Some would also provide a review of CMOS chips for gamma ray image sensors.

Recent Advances in Technology Research and Education Dumitru Luca, Lucel Sirghi, Claudiu Costin, 2017-09-08

This book presents selected contributions to the 16th International Conference on Global Research and Education Inter Academia 2017 hosted by Alexandru Ioan Cuza University of Iași, Romania from 25 to 28 September 2017. It is the third volume in the series following the editions from 2015 and 2016. Fundamental and applied research in natural sciences have led to crucial developments in the ongoing 4th global industrial revolution in the course of which information technology has become deeply embedded in industrial management research and innovation and just as deeply in education and everyday life. Materials science and nanotechnology, plasma and solid state physics, photonics, electrical and electronic engineering, robotics and metrology, signal processing, e learning, intelligent and soft computing have long since been central research priorities for the Inter Academia Community IAC a body comprising 14 universities and research institutes from Japan and Central East European countries that agreed in 2002 to coordinate their research and education programs so as to better address today's challenges. The book

is intended for use in academic government and industrial R D departments as a reference tool in research and technology education The 42 peer reviewed papers were written by more than 119 leading scientists from 14 countries most of them affiliated to the IAC *Proceedings of 2024 12th China Conference on Command and Control* Chinese Institute of Command & Control,2024-12-26 This book contains the original peer reviewed research papers presented at the 12th China Conference on Command and Control C2 CHINA 2024 held in Beijing China on 17 18 May 2024 Topics covered include but are not limited to Theory Method and Technique of Military Command Multi domain Command and Control Counter terrorism Special Operations Command and Control Smart City and Social Governance Logistics and Equipment Support Smart Barracks System Management Intelligent Air Traffic Control and Integrated Transportation Intelligent Logistics and Supply Chain Management Security Protection and Emergency Management Multi domain Situational Awareness and Cognition Information Fusion Theory and Technology Cognitive and Behavioural Theory Techniques Cyberspace Situational Awareness and Mapping Planning Decision Theory and Technology Cognitive Game Intelligent Game Theory and Technology Unmanned Systems Command and Control Cluster Intelligence and Cooperative Control Intelligent Command and Dispatch System and Technology Cloud Control Active Disturbance Rejection Control Theory and Technology Complex System Reliability Toughness Robustness Communication Navigation and Guidance Technology in Command and Control Data Link Theory and Technology Cyberspace Security Theory and Technology Space Information System and Satellite Resource Management Satellite Internet Communication Navigation and Remote Sensing Integration and Security Technology Intelligent Internet of Things Technology Electromagnetic Spectrum Security and Control Artificial Intelligence Machine Learning GPT Technology Virtual Reality Human Computer Interaction and Intelligent Wearable Technology Big Data Big Model Theory and Technology Meta Universes Digital Twins and Parallel Systems Blockchain Technology The papers presented here share the latest findings on theories algorithms and applications in command and control making the book a valuable resource for researchers engineers and students alike *Handbook of Superconductivity* David A.
